Data Abstraction and Problem Solving with C++ Frank M. Carrano 1998 "Focusing on data abstraction and data structures, the second edition of this very successful book continues to emphasize the needs of both the instructor and the student. The book illustrates the role of classes and abstract data types (ADTs) in the problem-solving process as the foundation for an object-oriented approach. Throughout the next, the distinction between specification and implementation is continually stressed. The text covers major applications of ADTs, such as searching a flight map and performing an event-driven simulation. It also offers early, extensive coverage of recursion and uses this technique in many examples and exercises. Overall, the lucid writing style, widespread use of examples, and flexible coverage of material have helped make this a leading book in the field." --Book Jacket.

Data Abstraction and Problem Solving with C++ Frank M. Carrano 2005 Designed for a second course in computer science, this textbook introduces the data abstraction technique for building walls between a program and its data structures, and presents various abstract data types and their implementations as C++ classes. The author evaluates the advantages and disadvantages of array-based and pointer-based data structures, and explains the concepts behind recursion, inheritance, polymorphism, algorithm efficiency, and balanced search trees. Annotation : 2004 Book News, Inc., Portland, OR (booknews.com).
Data Structures and the Standard Template Library William Joseph Collins 2003 "DATA STRUCTURES AND THE STANDARD TEMPLATE LIBRARY by William Collins teaches the fundamentals of Data Structures and their implementations. It uses C++ as the language of instruction. Most of the data structures are provided in the Standard Template Library (STL), which students will be able to use in their further coursework and beyond. To further students' understanding of implementation issues, alternative implementation (other than the STL) are also discussed. Hands-on learning is promoted throughout the text by the use of Programming Projects and labs. Programming projects, at the end of each chapter, allow students to develop and implement their own data structures or to extend or apply data structures introduced in the chapter. Additionally, optional labs accompany the text and allow students to practice by giving them opportunities to code. These labs can be used in many different ways such as in a closed lab, in an open lab, or for optional homework assignments"--Publisher description.
