Interpreting Basic Statistics Zealure C. Holcomb
2016-10-04 • Students get valuable practice in interpreting statistical reporting as it actually appears in journals. In each of the 62 exercises, your students will read a brief excerpt of statistical reporting from a published research article. • Each exercise begins with guidelines for interpreting the statistics in the excerpt. • The questions on the excerpts promote learning by requiring students to • interpret information in tables and figures, • perform simple calculations to further their interpretations, • critique data-reporting techniques, and • evaluate procedures used to collect data. • Each exercise covers a limited number of statistics,

making it easy for you to coordinate the exercises with lectures and a main textbook. • The questions in each exercise are divided into two parts: (1) Factual Questions and (2) Questions for Discussion. The factual questions require careful reading for details, while the discussion questions show students that interpreting statistics is more than a mathematical exercise. These questions require them to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations. • Thirteen new exercises interspersed throughout show how to interpret a greater array of statistical reporting.

Understanding Research Methods Mildred L.

Patten 1997 A perennial best-seller since 1997, this updated text provides a detailed overview of all the important concepts traditionally covered in a research methods class. The numerous examples and large number of exercises help students master the material. Divided into short sections, this text makes it easy for you to give customized assignments.

Interpreting Basic Statistics Keith S. Cox 2021-09-30 Interpreting Basic Statistics gives students valuable practice in interpreting statistical reporting as it actually appears in peer-reviewed journals. Features of the ninth edition: • Covers a broad array of basic statistical concepts, including topics drawn from the New Statistics • Up-to-date journal excerpts reflecting contemporary styles in statistical reporting • Strong emphasis on data visualization • Ancillary materials include data

sets with almost two hours of accompanying tutorial videos, which will help students and instructors apply lessons from the book to real-life scenarios About this book Each of the 63 exercises in the book contain three central components: 1) an introduction to a statistical concept, 2) a brief excerpt from a published research article that uses the statistical concept, and 3) a set of questions (with answers) that guides students into deeper learning about the concept. The questions on the journal excerpts promote learning by helping students • interpret information in tables and figures, • perform simple calculations to further their interpretations, • critique data-reporting techniques, and • evaluate procedures used to collect data. The questions in each exercise are divided into two parts: (1) Factual Questions and (2) Questions for Discussion. The Factual Questions require careful reading for details, while the discussion questions show that interpreting statistics is more than a

mathematical exercise. These questions require students to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations. Each exercise covers a limited number of topics, making it easy to coordinate the exercises with lectures or a traditional statistics textbook.
