Mathematical Models in

Biology Leah Edelstein-Keshet 1988 The major aim of this book is to present instances of interaction between two major disciplines, biology and mathematics. The goal has been that of addressing a fairly wide audience. Biology students will find this text useful as a summary of modern mathematical methods currently used in modelling, and furthermore, applied mathematics students may benefit from examples of applications of mathematics to

real-life problems. As little background as possible has been assumed throughout the book: prerequisites are basic calculus so that undergraduate students, as well as beginning graduate students, will find most of the material accessible.

Adaptive Management of Renewable Resources

Carl J. Walters 1986 Adaptation to Climate Change through Water Resources

Management Dominic Stucker 2014-08-27 The impacts of human-induced climate change are largely mediated by water, such as alterations in

precipitation and glacial melt patterns, variations in river flow, increased occurrence of droughts and floods, and sea level rise in densely populated coastal areas. Such phenomena impact both urban and rural communities in developed, emerging, and developing countries. Taking a systems approach, this book analyzes evidence from 26 countries and identifies common barriers and bridges for local adaptation to climate change through water resources management. It includes a global set of case studies from places experiencing increased environmental and social pressure due to population growth, development and migration, including in Africa, Asia, Australia, Europe, North and South America. All chapters consider the crosscutting themes of adaptive capacity, equity, and sustainability. These point to resilient water allocation policies and practices that are capable of protecting social and environmental interests, whilst ensuring the efficient

use of an often-scarce resource.

Population Dynamics and

Climate Change José Miguel

Guzmán 2009 This book

broadens and deepens

understanding of a wide range of population-climate change linkages. Incorporating population dynamics into research, policymaking and advocacy around climate change is critical for understanding trajectory of global greenhouse gas emissions, for developing and implementing adaptation plans and thus for global and national efforts to curtail this threat. The papers in this volume provide a substantive and methodological guide to the current state of knowledge on issues such as population growth and size and emissions; population vulnerability and adaptation linked to health, gender disparities and children; migration and urbanization; and the data and analytical needs for the next stages of policy-relevant research.

The Journal of Wildlife Management 2000

Fish Population Dynamics J. A. Gulland 1988-11-17 This new edition provides updated information on population dynamics of major food fishes,

and reviews the various methods used to study quantitative impacts of fishing on fish stocks. Contributors provide an historical background of the subject, then go on to cover current theories and methods of stock assessment, how these theories and methods have been applied in practice, and the effects of fisheries management on fish populations. They discuss length-based methods of stock assessment, multi-species fisheries, and provide data on fish populations in the North Atlantic, the Irish Sea, off Australia, Southeast Asia, and other regions. Completely revised and updated, including several new chapters.

Ecology and Management of a Neotropical Rainforest

Sylvie Gourlet-Fleury 2004 In 1982, the "Sylvicultural research on the natural forest stands of French Guiana" operation was initiated, and since then, the Paracou experimental site has been a favourite place for basic logical research concerning the structure, dynamics, diversity

and functioning of the lowland rainforest of coastal French Guiana. The site offers more than 100 hectares of plots where trees are fully mapped, and an experimental design combining logging and thinning with undisturbed controls, allowing assessment of the impact of well-documented disturbances on the characteristics of various forest stands and tree populations. In this book, 40 authors summarize their experience and results at Paracou. Topics include (i) forest structure and floristic composition; (ii) ecosystem-level carbon dynamics; (iii) light requirements, patterns of water use and root symbiotic status of the main species; (iv) gene flow and genetic diversity; (v) regeneration strategies, growth behaviour and dynamics of stands before and after silvicultural operations; (vi) modelling forest dynamics. A final chapter discusses the practical lessons for forest management that have resulted from research operations at

Paracou. This book is intended for advanced students and researchers in tropical forestry and ecology, as well as forest managers and decision-makers concerned by the potential impact of human actions on tropical forest ecosystems. *Life* David E. Sadava 2008 This text aims to establish biology as a discipline not just a collection of facts. *Life* develops students' understanding of biological processes with scholarship, a smooth narrative, experimental contexts, art and effective pedagogy.

Effective Ecological Monitoring Gene Likens 2018-05 Long-term monitoring programs are fundamental to understanding the natural environment and managing major environmental problems. Yet they are often done very poorly and ineffectively. This second edition of the highly acclaimed *Effective Ecological Monitoring* describes what makes monitoring programs

successful and how to ensure that long-term monitoring studies persist. The book has been fully revised and updated but remains concise, illustrating key aspects of effective monitoring with case studies and examples. It includes new sections comparing surveillance-based and question-based monitoring, analysing environmental observation networks, and provides examples of adaptive monitoring. Based on the authors' 80 years of collective experience in running long-term research and monitoring programs, *Effective Ecological Monitoring* is a valuable resource for the natural resource management, ecological and environmental science and policy communities.
