*The New Walford Guide to Reference Resources* Ray Lester 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, The New Walford naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might, The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature. This ensures that The New Walford is clear, easy-to-use and intuitive. - Publisher.

This edition incorporates updates to reflect contemporary organizations and devices, including graphics processing units (GPUs), quantum computing, and the latest supercomputer systems. It also includes a description of the two popular Instruction Set Architectures (ARM and RISC-V). The book is suitable for a one-or two-semester undergraduate or beginning graduate course in computer science and computer engineering; its previous editions have been adopted by 120+ universities around the world.
