Islamic Art Janey Levy 2006-08-01 Discusses the influence of mathematics on Islamic art.

Tessellations with Stars and Rosettes Toni Sellarès 2025-04-07 The main objective of the book is to teach how to practically construct periodic tessellations with stars and rosettes using an Interactive Geometry Software (IGS). Stars and rosettes are among the most characteristic geometric ornamental motifs of Islamic art. They are found on walls, ceilings, doors, and windows in both religious and secular buildings. Tessellations are repetitive patterns of shapes that fit together without gaps or overlaps, and they are periodic when they can be constructed by translations of a shape in two different directions. Periodic tessellations with stars and rosettes are complex and symmetrical compositions with rhythmic repetitions of profound beauty. An IGS allows to create and manipulate geometric constructions, producing accurate drawings. The book only assumes knowledge of basic geometric concepts and is self-contained while also providing all the necessary background information. *Tessellations with Stars and Rosettes* is aimed at students and graduates of mathematics, design, architecture, artists, and art historians, as well as anyone who wants to draw tessellations of stars and rosettes using IGS. It is suitable for a trimester or a semester course, and can also be used for self-study.

Geometric Patterns with Creative Coding Selçuk Artut 2023-07-12 Facilitate coding in generating geometric motives with a special focus on analyzing their geometric formulations. This book aims to teach analytical coding skills by combining arts and mathematics. Geometric patterns are quintessentially important for understanding today's media arts and their relationship with mathematics. With the main emphasis on this, author Selçuk Artut proposes a certain workflow to mathematically analyze a geometric pattern and use creative coding skills to render it on

a computer screen. When done, you'll understand the basics of coding and expand the provided structure to cover issues of creative coding in particular. This book will also present a workflow to geometrically analyze and build patterns with detailed examples. What You Will Learn Gain insight into the field of geometric patterns and its cultural value Review dialectic creativity that takes place between humans and computers Use code as a creative tool to use human-computer interaction to develop one's creative skills Who This Book Is For Any person who has an interest in using coding as a creative tool. University students from Arts, Design, Architecture, and Computer Science departments. Artists and designers who are eager to implement creative coding in their artistic production.

The Art of the Islamic Garden Emma Clark 2004 The Islamic garden is regarded as one of the highest forms of visual art in the civilization of Islam. The principal elements are water and shade; they are also characterized by the chahar-bagh: a four-fold pattern, constructed around a central pool or fountain, with four streams flowing toward the four corners of the earth. Aesthetically, this design provides a striking feature in itself; however, a true appreciation of an Islamic garden is only ever complete with an understanding of the spiritual symbolism manifested in its design and planting. This lavish book provides both an intellectual guide to the symbolism of the Islamic garden and a practical guide to its component parts, with recommendations for suitable trees, shrubs, and flowers and advice on creating an Islamic garden in cooler climates. Garden designer Emma Clark teaches Visual Islamic and Traditional Arts at The Prince's Foundation, London.

Journey of the Tall Horse Mervyn Millar 2006-04 "In 1826 a giraffe was captured in the African savannah and transported from Egypt to France to be presented to King Charles X as a prize addition to his menagerie. In 2004 a unique collection of performers from around the world joined

together to tell its story with the help of a grand variety of puppet designers, actors, dancers, stilt-walkers, music, costumes, graphics - and a life-size puppet giraffe." "Journey of the Tall Horse tells how this ambitious collaboration came about, and how the contributors worked together, incorporating a huge range of styles and techniques and overcoming barriers of culture and language, to perform the show to great success. Filled with photographs, original design sketches and comments from all those involved, Mervyn Millar's eye-witness account takes the reader to the heart of the theatre-making process, capturing all the enthusiasm and exhaustion, frustrations and rewards of being involved in a groundbreaking stage production. The book also includes the performance script of Tall Horse by Khephra Burns."--BOOK JACKET.

Islamic Geometric Patterns Eric Broug 2008 Geometric patterns are perhaps the most recognizable visual expressions of Islamic art and architecture, magnificent in their beauty and awe-inspiring in their execution. Now, with the aid of this book, anyone can learn how to master this ancient art and create intricate patterns or re-create classic examples. An introduction guides the reader through the basics, and is followed by some of the best examples of geometric patterns from around the world, arranged into three levels of complexity, with careful, step-by-step instructions taking the reader through the stages of composition. The book also includes a CD-ROM, allowing you to experiment with Islamic geometric patterns on the computer.

Islamic Design Daud Sutton 2007-11-06 There are two key aspects to the visual structure of Islamic design: calligraphy using Arabic script, and abstract ornamentation using a varied visual language. Focusing on the construction and meaning of Islamic geometric patterns this book offers insight into Islamic culture and is a resource for anyone interested in this artistic tradition. -- Dust Jacket.

Critical Spaces Alexandru Calcatinge 2014 This book relates spatial existence to the challenges arising from the critical times in which we are living and from the supposedly degrading moral nature of societies. It contains contributions from architectural theory and education; urban, spatial, and regional studies; as well as cultural landscape studies. The book critically addresses issues in the context of today's major cultural, moral, political, economical, ecological, ideological, and spiritual crises. It provides a focus and a conceptual framework about our most crucial spaces in the light of crises. (Series: Urban and Spatial Planning / Stadt- und Raumplanung - Vol. 13)

Secrets of Islamic Patterns Aline Marion 2014-10 ABOUT THE BOOK A one of a kind book, Secrets of Islamic Patterns unlocks the mysteries of Islamic geometric patterns that adorn some of the most famous architecture and decorative arts in the Islamic world. Designed to engage both a younger audience and the adult beginner, the book provides a step-by-step process for creating stunning Islamic geometric patterns. Contains drawing exercises with easy to follow instructions, making pattern construction extremely accessible, and turning what at first appears difficult into a fun and educational activity. The accompanying puzzle is a key element to this accessibility and unique in the genre, introducing a playful and inter-active tool for all readers. Mathematics of Ornament makes the abstract and complex art

form of Islamic geometric patterns both easy to do, but also fun and exciting. The book is extremely educational, teaching readers the basic principles of geometry, and enabling them to learn how mathematics and design are connected. ABOUT THE ACTIVITY PUZZLE The puzzle consists of four separate shapes with a geometric design printed on them, shapes that when placed together construct a larger pattern. Constructing the pattern enables the reader to learn how to build elaborate patterns from simple elements. The puzzle also encourages experimentation! The pattern combination of tiles varies with each use, producing unique and different patterns, and furthering creativity. ABOUT THE BOX SET How-to book and puzzle pieces housed in a sturdy box-set with easy to follow instructions for all ages. Durable and expertly finished puzzle pieces housed in a beautiful box. Readers have the opportunity to turn their patterns into a work of art to display at home. This will be the first in a series of puzzles looking at other geometric designs not only from the Islamic tradition but other World traditions. **The Best Writing on Mathematics 2017** Mircea Pitici 2017-10-31 The year's finest mathematics writing from around the world This annual anthology brings together the year's finest mathematics writing from around the world. Featuring promising new voices alongside some of the foremost names in the field, The Best Writing on Mathematics 2017 makes available to a wide audience many articles not easily found anywhere else—and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math, and take readers behind the scenes of today's hottest mathematical debates. Here Evelyn Lamb describes the excitement of searching for incomprehensibly large prime numbers, Jeremy Gray speculates about who would have won math's highest prize—the Fields Medal—in the nineteenth century, and Philip Davis looks at mathematical results and artifacts from a business and marketing viewpoint. In other essays, Noson Yanofsky explores the inherent limits of knowledge in mathematical thinking, Jo Boaler and Lang Chen reveal why finger-counting enhances children's receptivity to

mathematical ideas, and Carlo Séquin and Raymond Shiau attempt to discover how the Renaissance painter Fra Luca Pacioli managed to convincingly depict his famous rhombicuboctahedron, a twenty-six-sided Archimedean solid. And there's much, much more. In addition to presenting the year's most memorable writings on mathematics, this must-have anthology includes a bibliography of other notable writings and an introduction by the editor, Mircea Pitici. This book belongs on the shelf of anyone interested in where math has taken us—and where it is headed.

The Pattern Book: Fractals, Art And Nature Clifford A Pickover

1995-06-09 This book will allow you to travel through time and space. To facilitate your journey, the editor has scoured the four corners of the earth in a quest for unusual people and their fascinating patterns. From Mozambique, to Asia, to many European countries, the contributors to The Pattern Book include world-famous cancer researchers, little-known artists and eclectic computer programmers. Some of the patterns are ultramodern, while others are centuries old. Many of the patterns are drawn from the universe of mathematics. Computer recipes are scattered throughout. Although the emphasis is on computer-generated patterns, the book is informal and the intended audience spans several fields. The emphasis is on the fun that the true pattern lover finds in doing, rather than in reading about the doing! The book is organized into three main parts: Representing Nature (for those patterns which describe or show real physical phenomena, e.g., visualizations of protein motion, sea lilies, etc.), Mathematics and Symmetry (for those patterns which describe or show mathematical behavior, e.g. fractals), and Human Art (for those patterns which are artistic works of humans and made without the aid of a computer, e.g. Moslem tiling patterns.)

Draw Islamic Geometric Star Patterns Eric Broug 2014-10-07 Learn how to draw seven geometric star patterns from around the Islamic world, using only a pencil, straight edge, and a pair of compasses. Patterns featured are from Baghdad, Fes, Cairo, Konya, Delhi and Damascus. Suitable for ages 9 and up. No calculations are necessary. The least complicated way of learning Islamic geometric design is to

understand and use the same techniques that craftsmen in the Islamic world have used for centuries. These craftsmen were not mathematicians; they knew how to make things with their hands but they did not use measurements or calculate angles to make their compositions. Their tools were a pair of compasses, a ruler and a pencil. By drawing lines, circles and arcs they were able to make all their patterns and compositions. This is also how you will be able to draw these patterns. This book will teach you how to draw seven different star patterns. All the patterns in this book can be made without calculations and measurements. They can be made by hand or on a computer. All you need to be able to do is draw circles and lines. The tools you need if you are drawing by hand are a pair of compasses, a ruler and pencils. Each pattern is constructed in a step-by-step process.
