A New Agenda for Higher Education William M. Sullivan 2008-04-04 In A New Agenda for Higher Education, the authors endorse higher education's utility for enhancing the practical as well as intellectual dimensions of life by developing a third, different conception of educational purpose. Based on The Carnegie Foundation for the Advancement of Teaching seminar that brought together educators from six professional fields with faculty from the liberal arts and sciences, A New Agenda for Higher Education proposes an educational aim of "practical reason," focusing on the interdependence of liberal education and professional training.

AI Innovations in Language Education and Communication Aby John 2026-06-02 In today's interconnected world, advancing language education and communication skills is crucial for personal growth, career prospects, and cross-cultural understanding. The integration of AI in

language learning and multilingual communication has revolutionized the field. It offers innovative solutions like language learning apps, real-time translation, and conversational agents. These AI-powered tools enhance language proficiency and fluency. They present opportunities for more effective and inclusive language education. There are, however, questions on AI's effectiveness, accessibility, and potential drawbacks. These include biases towards mainstream languages, varying accuracy, and reliability. Moreover, AI-driven language processing also raises ethical concerns related to privacy, data security, and cultural nuances that can potentially compromise interaction quality. This volume explores the transformative potential of AI in advancing language education and communication skills. It highlights benefits and challenges to foster reliable and inclusive AI-powered language solutions. It aims to ensure AI's effective integration and promote meaningful multilingual interactions, thereby enhancing the quality of language education and communication in today's globalized society.

International Handbook of Metacognition and Learning Technologies Roger Azevedo 2013-04-23 Education in today's technologically advanced environments makes complex cognitive demands on students pre-learning, during, and post-learning. Not surprisingly, these analytical learning processes--metacognitive processes--have become an important focus of study as new learning technologies are assessed for effectiveness in this area. Rich in theoretical models and empirical data, the International Handbook of Metacognition and Learning Technologies synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self-regulated learning (SRL), examining theories and models of metacognition, empirical issues in the study of SRL, and the expanding role of educational technologies in helping students learn. Innovations in

multimedia, hypermedia, microworlds, and other platforms are detailed across the domains, so that readers in diverse fields can evaluate the theories, data collection methods, and conclusions. And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning. Identifies features designed to study or support metacognitive/SRL behaviors. Reviews how its specific theory or model addresses learners' metacognitive/SRL processes. Provides detailed findings on its effectiveness toward learning. Discusses its implications for the design of metacognitive tools. Examines any theoretical, instructional, or other challenges. These leading-edge perspectives make the International Handbook of Metacognition and Learning Technologies a resource of great interest to professionals and researchers in science and math education, classroom teachers, human resource researchers, and industrial and other instructors.
