Then, compare single-celled and multicellular organisms. Introduce the concept of DNA before exploring the different parts of a cell. From there, take a look at the jobs of these parts. Move on to cell reproduction by exploring mitosis and meiosis. Dissect plant and animal cells to see how they work and how they are similar. Look at the big picture by seeing how cells become organisms. Finally, learn how particles move through cell membranes with diffusion and osmosis. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

Gr. 5-8 Susan Lang 2007-09-01 Finish your journey through the human body with a ride through the bloodstream to visit all the organs in our body. Our resource breaks down each system of the human body to make it easier to understand as a whole. Start off by exploring the arteries, veins and capillaries. Examine your own heartbeat as you learn how to take your pulse. Then, follow the red blood cells as they bring oxygen to the rest of the body. Discover how the food we eat travels down to our stomach and gets digested. Learn how we get energy from that food, and what happens to waste that our body cannot digest. Travel through the excretory system to learn about all the different organs that help us get rid of waste. Build a model of a kidney to see it working in action. Finally, find out how two cells come together to create life. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.
