**Inorganic Chemistry** Tina Overton 2018 Leading the reader from the fundamental principles of inorganic chemistry, right through to cutting-edge research at the forefront of the subject, *Inorganic Chemistry, Seventh Edition* is the ideal course companion for the duration of a student's degree. The authors have drawn upon their

extensive teaching and research experience to update this text; the seventh edition retains the much-praised clarity of style and layout from previous editions, while offering an enhanced section on 'expanding our horizons'. The latest innovative applications of green chemistry have been added, to clearly illustrate the real-world significance of the subject. This edition also sees a greater use of learning features, including substantial updates to the problem solving questions, additional self-tests and walk through explanations which enable students to check their understanding of key concepts and develop problem-solving skills. Providing comprehensive coverage of inorganic chemistry, while placing it in context, this text will enable the reader to fully master this important subject. **Invitation to Mathematics**

Konrad Jacobs 1992-08-02

Based on a well-received course designed for philosophy students, this book is an informal introduction to mathematical thinking. The work will be rewarding not only for philosophers concerned with mathematical questions but also for serious amateur mathematicians with an interest in the "frontiers" as well as the foundations of mathematics. In what might be termed a sampler of the discipline, Konrad Jacobs discusses an unusually wide range of topics, including such items of contemporary interest as knot theory, optimization theory, and dynamical systems. Using Euclidean geometry and algebra to introduce the mathematical mode of thought, the author then turns to recent developments. In the process

he offers what he calls a "Smithsonian of mathematical showpieces": the five Platonic Solids, the Mbius Strip, the Cantor Discontinuum, the Peano Curve, Reidemeister's Knot Table, the plane ornaments, Alexander's Horned Sphere, and Antoine's Necklace. The treatments of geometry and algebra are followed by a chapter on induction and one on optimization, game theory, and mathematical economics. The chapter on topology includes a discussion of topological spaces and continuous mappings, curves and knots, Euler's polyhedral formula for surfaces, and the fundamental group. The last chapter deals with dynamics and contains material on the Game of Life, circle rotation, Smale's "horseshoe," and stability and instability, among other topics.
