International Conference of the Learning Sciences Barry J. Fishman 2013-04-15 The field of the learning sciences is concerned with educational research from the dual perspectives of human cognition and computing technologies, and the application of this research in three integrated areas: *Design: Design of learning and teaching environments, tools, or media, including innovative curricula, multimedia, artificial intelligence, telecommunications technologies, visualization, modeling, and design theories and activity structures for supporting learning and teaching. *Cognition: Models of the structures and processes of learning and teaching by which knowledge, skills, and understanding are developed, including the psychological foundations of the field, learning in content areas, professional learning, and the study of learning enabled by tools or social structures. *Social Context: The social, organizational, and cultural dynamics of learning and teaching across the range of formal and informal settings, including schools, museums, homes, families, and professional settings. Investigations in the learning sciences approach these issues from an interdisciplinary stance combining the traditional disciplines of computer science, cognitive science, and education. This book documents the proceedings of the Fourth International Conference on the Learning Sciences (ICLS 2000), which brought together experts from academia, industry, and education to discuss the application of theoretical and empirical knowledge from learning sciences research to practice in K-12 or higher education, corporate training, and learning in the home or other informal settings.

Artificial Intelligence in Education Ulrich Hoppe 2003 This work reports on research into intelligent systems, models, and architectures for educational computing applications. It covers a wide range of advanced information and communication and computational methods applied to education and training. *Educom* 1984 Vols. for 197 - include Edunet news, ISSN 0146-1788.

Multimedia, Computer Graphics and Broadcasting Dominik Slezak 2010-05-10 As future generation information technology (FGIT) becomes specialized and fragmented, it is easy to lose sight that many topics in FGIT have common threads and, because of this, advances in one discipline may be transmitted to others. Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole. Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts. Through such hybrid philosophy, a new principle can be discovered, which has the propensity to propagate throughout multifaceted disciplines. FGIT 2009 was the first mega-conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT, conducted by separate scientific committees, but coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications (ASEA), Bio-Science and Bio-Technology (BSBT), Control and Automation (CA), Database Theory and Application (DTA), Disaster Recovery and Business Continuity (DRBC; published independently), Future Generation Communication and Networking (FGCN) that was combined with Advanced Communication and Networking (ACN), Grid and Distributed Computing (GDC), Multimedia, Computer Graphics and Broadcasting (MulGraB), Security Technology (SecTech), Signal Processing, Image Processing and Pattern Recognition (SIP), and Web and e-Service, Science and Technology (UNESST).

Deep Comprehension Keith K. Millis 2018-09-25 This volume provides an overview of research from the learning sciences into understanding, enhancing, and measuring "deep comprehension" from a psychological, educational, and psychometric perspective. It describes the characteristics of deep comprehension, what techniques may be used to improve it, and how deep levels of comprehension may be distinguished from shallow ones. It includes research on personal-level variables; how intelligent tutors promote comprehension; and the latest developments in psychometrics. The volume will be of interest to senior undergraduate and graduate students of cognitive psychology, learning, cognition and instruction, and educational technology.

Computer Applications in Reading Jay S. Blanchard 1987 Intended as a reference for researchers, teachers, and administrators, this book chronicles research, programs, and uses of computers in reading. Chapter 1 provides a broad view of computer applications in education, while Chapter 2 provides annotated references for computer based reading and language arts programs for children and adults in classroom and clinic settings, including LOGO, cloze procedure, language experience approach, special education, spelling, Native American education, and English as a second/foreign language. Chapter 3 introduces the reader to software evaluation guidelines and criteria, including references about the development of computer based reading programs and projects. Chapter 4 reviews computer based research on teaching reading, reading assessment, and psychological and physiological aspects of the reading process. Chapter 5 presents references on word processing, writing, and reading, and Chapter 6 offers explanations for the puzzling questions surrounding computer based readability and text analysis. References to computer based activities in reading readiness and beginning reading are presented in chapter 7, while chapter 8 discusses computer managed reading instruction. Chapter 9 details advances in computer based speech technology and reading instruction and the focus in chapter 10 is on text legibility and computers. Chapter 11 provides references about recent developments with CD ROMs (Compact Disk Read Only Memory) and CDIs (compact disk interactive), and chapter 12 summarizes by speculating on the importance of other emerging applications in computer based reading, such as simulations, artificial intelligence, programming and authoring systems, telecommunications and satellite communications, and robots. Two appendixes list companies that produce software and describe integrated learning systems that contain reading and language arts software. (SKC)

A Quiz Manual for Computer Literacy 1994-95 Hugh L. McHenry 1994-03-01 This book is a collection of 101 quizzes for general education computer literacy ... Each quiz contains 10 multiple-choice questions. Some questions are designed to validate what you know; others to teach new concepts ... The manual is designed for students to collaborate on finding answers ... Discussion is encouraged ... The point behind the questions is to promote learning, not to take a test.-Intro.
