Fehlertolerierende Rechensysteme K.-E. Grosspietsch 2012-12-06 In the last decade of Computer Science development, we can observe a growing interest in fault-tolerant computing. This interest is the result of a rising number of applications where reliable operation of computing systems is an essential requirement. Besides basic research in the field of fault-tolerant computing, there is an increasing number of systems especially designed to achieve fault-tolerance. It is the objective of this conference to offer a survey of present research and development activities in these areas. The second GI/NTG/GM~ Conference on Fault-Tolerant Computing Systems has had a preparatory time of about two years. In March 1982, the first GI conference concerning fault-tolerant computing systems was held in Munich. One of the results of the conference was to bring an organizational framework to the FTC community in Germany. This led to the founding of the common interest group "Fault-Tolerant Computing Systems" of the Gesellschaft für Informatik (GI), the Nachrichtentechnische Gesellschaft (NTG), and the Gesellschaft für Meß- und Regelungstechnik (VDI/VDE-GMR) in November 1982. At that time, it was also decided to schedule a biannual conference on fault-tolerant computing systems. One of the goals of this second conference is to strengthen the relations with the international FTC community; thus, the call for papers was extended not only to German-speaking countries, but to other countries as well.

Coding Theory Andre Neubauer 2007-10-22 One of the most important key technologies for digital communication systems as well as storage media is coding theory. It provides a means to transmit information across time and space over noisy and unreliable communication channels. Coding Theory: Algorithms, Architectures and Applications provides a concise overview of channel coding theory and practice, as well as the accompanying signal processing architectures. The book is unique in presenting algorithms, architectures, and applications of coding theory in a unified framework. It covers the basics of coding theory before moving on to discuss algebraic linear block and cyclic codes, turbo codes and low density parity check codes and space-time codes. Coding Theory provides algorithms and architectures used for

implementing coding and decoding strategies as well as coding schemes used in practice especially in communication systems. Feature of the book include: Unique presentation-like style for summarising main aspects Practical issues for implementation of coding techniques Sound theoretical approach to practical, relevant coding methodologies Covers standard coding schemes such as block and convolutional codes, coding schemes such as Turbo and LDPC codes, and space time codes currently in research, all covered in a common framework with respect to their applications. This book is ideal for postgraduate and undergraduate students of communication and information engineering, as well as computer science students. It will also be of use to engineers working in the industry who want to know more about the theoretical basics of coding theory and their application in currently relevant communication systems

Williams Syndrome Across Languages Susanne Bartke 2004-01-01

Williams Syndrome (WS), aka Williams Beuren Syndrome, is a developmental disorder that we have known about for some forty years. The cause for WS was detected only recently: a micro deletion on chromosome 7, more specifically at the region of chromosome 7q11.23. The cognitive and behavioral profile in WS is characterized by a marked discrepancy between verbal and non-verbal skills combined with relatively spared linguistic skills. Recent research has shown considerable progress defining the areas of intactness in linguistic abilities. This volume builds on that research, giving an overview of the psycholinguistic research undertaken and opening up new perspectives and insights through new data and analyses. This book is of interest to researchers of applied cognitive science and to linguists more occupied with theoretical research.
