## **Teaching Science to English Language Learners**

Luciana C. de Oliveira 2017-09-18 This edited collection explores how science can be taught to English language learners (ELLs) in 21st century classrooms. The authors focus on the ways in which pre-service and in-service science teachers have developed—or may develop—instructional effectiveness for working with ELLs in the secondary classroom. Chapter topics are grounded in both research and practice, addressing a range of timely topics including the current state of ELL education in the secondary science classroom, approaches to leveraging the talents and strengths of bilingual students in heterogeneous classrooms, best practices in teaching science to multilingual students, and ways to infuse

the secondary science teacher preparation curriculum with ELL pedagogy. This book will appeal to an audience beyond secondary content area teachers and teacher educators to all teachers of ELLs, teacher educators and researchers of language acquisition more broadly.

Tech Tally National Research Council 2006-07-27 In a broad sense, technology is any modification of the natural world made to fulfill human needs or desires. Although people tend to focus on the most recent technological inventions, technology includes a myriad of devices and systems that profoundly affect everyone in modern society. Technology is pervasive; an informed citizenship needs to know what technology is, how it works, how it is created, how it shapes our society, and how society influences technological development. This understanding depends in large part on an individual level of technological literacy. Tech Tally: Approaches to Assessing Technological

Literacy determines the most viable approaches to assessing technological literacy for students, teachers, and out-of-school adults. The book examines opportunities and obstacles to developing scientifically valid and broadly applicable assessment instruments for technological literacy in the three target populations. The book offers findings and 12 related recommendations that address five critical areas: instrument development; research on learning; computer-based assessment methods, framework development, and public perceptions of technology. This book will be of special interest to individuals and groups promoting technological literacy in the United States, education and government policy makers in federal and state agencies, as well as the education research community.

**Learning Science** Archie Lapointe 1992 This publication reports the results of the second International

Assessment of Educational Progress for science. Twenty countries assessed the mathematics and science achievement of 13-year-old students and 14 countries assessed 9-year-old students in these same subjects. In some cases, participants assessed virtually all age-eligible children in their countries and in other cases they confined samples to certain geographic regions, language groups, or grade levels. In some countries, significant proportions of age-eligible children were not represented because they did not attend school. The following countries participated: Brazil, Canada, China, England, France, Hungary, Ireland, Israel, Italy, Jordan, Korea, Mozambique, Portugal, Scotland, Slovenia, Soviet Union, Spain, Switzerland, Taiwan, and the United States. Some of the reported highlights from the study are as follows: (1) in nearly all populations 13-year-old boys performed significantly better than girls; (2) science tests and quizzes

are used most frequently in Taiwan, the Soviet Union, the United States, and Jordan; (3) the highest-achieving countries with the exception of Taiwan do not practice ability grouping within science classes at age 13; and (4) 13-year-olds in most countries do not spend a great deal of time doing science homework.
