Handbook of Adult Development and Learning Carol Hoare 2006

Adult development and learning have always existed as two separate fields of study, with development falling under psychology and learning under education. Recent advances in theory, research, and practice, however, have made it clear that an important reciprocal relationship exists between them: advances in development frequently lead to learning, and conversely, learning quite often fuels development. The synchronicity between development and learning is responsible for positive changes in many capacities, including insight, intelligence, reflective and meta-cognition, personality expression, interpersonal competence, and self-efficacy. This synchronicity is also leading to the growth of a new discipline at the borders of adult development and learning. The Handbook of Adult Development and Learning is the first to bring together the leading scholars from both adult development and learning to explore what will form the foundation for this new discipline--the latest research at the intersection of these fields. It examines six major aspects of their intersection: foundations, key areas of integration, the self system, higher reaches of development and learning, essential contexts, and specific applications. An introductory chapter explains why it is so important to recognize and fuel the growth of this new discipline. Subsequent chapters review the latest theoretical and empirical literature and provide a rich itinerary for future research. This handbook is a must-read for all who promote optimal aging. It will be an invaluable reference for scholars in development and education, as well as rich resource for policy makers and practitioners, such as corporate executives and human-resource personnel.

Adult Development Michael L. Commons 1989-08-22 In recent years, a number of researchers have begun to question the Piagetian theory that cognitive structural development ends with the adolescent's acquisition of formal operations and have begun to focus on the development of thought in late adolescence and adulthood. This volume brings together the work of numerous scholars in cognitive social, and perceptual development to explore the nature of postformal thought. The contributors represent the diversity of models and approaches that characterize the ongoing research in this area and, at the same time, act to unify this body of literature within a common framework of analysis. Students, researchers, and practicing psychologists will find her important new insights into the evolution of thought processes throughout the human lifespan. A number of the papers present alternative, but closely related models of postformal cognition, as well as techniques of measuring postformal thought. Of special interest is the presentation of data supporting claims that thought represents a stage qualitatively distinct from the transition between hierarchical and formal operations. The opening chapter describes Beethoven's cognitive development in late adolescence and adulthood, while subsequent essays discuss the modifications of formal structures that develop in the attempt to use formal reasoning in real-life problem solving. A set of studies that extend the study of postformal thought into the domains of moral thought and social reasoning complete the volume.

The Oxford Handbook of Reciprocal Adult Development and Learning Carol Hoare 2011-09-06 One of the "Best Books of 2011" from the Center for Optimal Adult Development The fields of adult development and the study of learning have traditionally been considered separate, with development falling under psychology and learning under education.

However, recent ideas, research, and practices that have emerged in these fields of study effectively emphasize the inherent reciprocal relationship that exists between them: advances in development frequently lead to learning, and conversely, learning almost necessarily fuels development. In this second edition of *The Oxford Handbook of Reciprocal Adult Learning and Development*, the synchronicity between development and learning is explored further, as expert authors advance the latest theories to provide a rich foundation for this new area of study and practice for this interrelated field of study. At the border of two disciplines, this handbook focuses on the capacities of intelligence, meta-cognition, insight, self-efficacy, spirituality, interpersonal competence, wisdom, and other key adult attributes as they relate to positive changes and personal growth in adults. Contexts for development and learning (e.g., the work role and environment) are also addressed, and mixed in throughout the volume are emanating implications for research, practice, and policy. What emerges is a thoughtful handbook for all who promote optimal aging, and is a must-read for academics, psychologists, and practitioners in adult development.
