Curriculum Planning Kenneth T. Henson 2015-01-09 The fifth edition of this critically acclaimed approach to curriculum planning continues to receive accolades for its balanced presentation, pertinent case studies, and advice from practicing educators. It skillfully interweaves the themes of multicultural education, constructivism, and education reform. The author documents the latest trends, such as e-learning, blended learning and flipped learning, the controversial Common Core State Standards, and the impact of technology in our schools, including the BYOD (bring your own device) movement, digital citizenship, and technological literacy. This well-researched text spotlights ways to involve parents, students, and teachers in the curriculum-planning process and engages the reader in critical thinking and analysis about curriculum planning and education reform.

Developing Assessment-Capable Visible Learners, Grades K-12 Nancy Frey 2018-01-11 "When students know how to learn, they are able to become their own teachers." —Nancy Frey, Douglas Fisher, and John Hattie Imagine students who describe their learning in these terms: "I know where I'm going, I have the tools I need for the journey, and I monitor my own progress." Now imagine the extraordinary difference this type of ownership makes in their progress over the course of a school year. This illuminating book shows how to make this scenario an everyday reality. With its foundation in principles introduced in the

authors' bestselling Visible Learning for Literacy, this resource delves more deeply into the critical component of self-assessment, revealing the most effective types of assessment and how each can motivate students to higher levels of achievement.

Measuring Up Daniel Koretz 2009-07-01 How do you judge the quality of a school, a district, a teacher, a student? By the test scores, of course. Yet for all the talk, what educational tests can and can't tell you, and how scores can be misunderstood and misused, remains a mystery to most. The complexities of testing are routinely ignored, either because they are unrecognized, or because they may be—well, complicated. Inspired by a popular Harvard course for students without an extensive mathematics background, *Measuring Up* demystifies educational testing—from MCAS to SAT to WAIS, with all the alphabet soup in between. Bringing statistical terms down to earth, Daniel Koretz takes readers through the most fundamental issues that arise in educational testing and shows how they apply to some of the most controversial issues in education today, from high-stakes testing to special education. He walks readers through everyday examples to show what tests do well, what their limits are, how easily tests and scores can be oversold or misunderstood, and how they can be used sensibly to help discover how much kids have learned.

Getting Into the Mathematics Conversation Portia C. Elliott 2008 Far from a run-of-the-mill readings book, *Getting into the Mathematics Conversation* is an outstanding compendium of the very best of the NCTM school journals' offerings on the broad subject of communication in the mathematics classroom. It spans all grade levels and targets all communication forms - listening and speaking, reading, writing, and multiple forms - that a teacher might wish to develop in students.

Educating Children with Velo-Cardio-Facial Syndrome, 22q11.2 Deletion Syndrome, and DiGeorge Syndrome, Third Edition Donna Cutler-Landsman 2020-01-01 The 22q11.2 deletion syndrome, also known as velo-cardio-facial syndrome and DiGeorge syndrome, is relatively new. The genetic test to determine if a child has it has only

been available since 1994. *Educating Children with Velo-Cardio-Facial Syndrome, 22q11.2 Deletion Syndrome, and DiGeorge Syndrome, Third Edition*, effectively blends the thoughtful research that has transpired within the past 25 years with practical and current educational strategies to better meet the needs of children with the 22q11.2 deletion syndrome and other developmental disabilities. With its expanded content, as well as new contributions from some of the most highly regarded experts in the field, *Educating Children with Velo-Cardio-Facial Syndrome, 22q11.2 Deletion Syndrome, and DiGeorge Syndrome, Third Edition* is an essential resource for teachers, parents, physicians, and therapists of children with this complicated learning profile. To first address the scientific information that is needed to understand the syndrome and the implications of current research, expert contributors present the results of current studies involving brain abnormalities, language/learning profiles, medical needs, and psychiatric and behavioral difficulties. These valuable chapters are written in a reader-friendly manner to help parents, professionals, and teachers gain useful and necessary comprehension of the unique characteristics of the 22q11.2DS population. The second part of the book is a practical guide to educating a child with 22q11.2DS from birth through adulthood. Divided into the various stages of development from preschool to adulthood, it includes information regarding the necessary tests special education teams should run, typical difficulties associated with learning, changes that occur with ability as the child matures, and behavioral problems in the school setting. New to the Third Edition: * Addition of recent research studies since 2012 * Current research and treatment options for mental health issues * Expanded and enhanced coverage of bullying and the social/emotional aspects of the syndrome * Discussion on the possibility of cognitive decline and how to address this at school * More information on Common Core State Standards and standardized testing for children with disabilities, including a section on understanding test scores * Homeschooling and other placement alternatives * Executive functioning deficits, their impact in the classroom, and approaches to use * Dealing with problem behaviors such as withdrawal and school refusal *

Cognitive remediation and new treatment strategies * New math and reading remediation techniques * New options for programming and post-secondary placements

Reconceptualizing Mathematics Judith Sowder 2012-12-28 More and more, prospective elementary teachers are being asked to develop what the Conference Board of Mathematical Sciences (CBMS) calls “the habits of a mathematical thinker.” This breakthrough text became the new standard for training future elementary math teachers by doing just that, helping them absorb the ideas underlying essential math concepts, rather than just working problems and memorizing facts. Created from extensive math education research and class-testing, the book’s innovative pedagogy, convenient format (three-hole punched, perforated pages, wide margins), and supporting technology make it the ideal text for helping today’s students become tomorrow’s teachers
