SME Mineral Processing and Extractive Metallurgy Handbook Courtney A. Young 2019-02-01 This landmark publication distills the body of knowledge that characterizes mineral processing and extractive metallurgy as disciplinary fields. It will inspire and inform current and future generations of minerals and metallurgy professionals. Mineral processing and extractive metallurgy are atypical disciplines, requiring a combination of knowledge, experience, and art. Investing in this trove of valuable information is a must for all those involved in the industry—students, engineers, mill managers, and operators. More than 192 internationally recognized experts have contributed to the handbook's 128 thought-provoking chapters that examine nearly every aspect of mineral processing and extractive metallurgy. This inclusive reference addresses the magnitude of traditional industry topics and also addresses the new technologies and important cultural and social issues that are important today. Contents Mineral Characterization and Analysis Management and Reporting Comminution Classification and Washing Transport and Storage Physical Separations Flotation Solid and Liquid Separation Disposal Hydrometallurgy Pyrometallurgy Processing of Selected Metals, Minerals, and Materials

Balance Sheet Recession Richard Koo 2003-10-24 In this groundbreaking book, leading international economist, Richard Koo argues that far from being the sick man of Asia, Japan is suffering from a temporary but highly unusual economic aberration. Economists and business commentators have always assumed that the majority of companies in any economy are forward looking and are trying to maximize profits. They never considered the possibility that a vast majority of companies may be placing their highest priorities on minimizing debt in order to repair their balance sheets. But that remote possibility has been the reality in Japan for the past decade, and more recently in many other countries including at least a part of the US. Balance Sheet Recession argues that contrary to popular belief, it is this massive shift in corporate behavior, instead of structural problems, that is the root cause of both the deflation and the non-performing loan problems that have troubled Japan for so long. It argues that when the causality runs from the corporate balance sheet problems to deflation and banking problems, a highly unconventional policy response is needed to stabilize the economy. After all, the last time anything similar has happened was the 1930s in the US. Richard Koo's experience in dealing with both the US banking crisis of the early 1980s and the Japanese balance sheet and banking problems of the last ten years makes him uniquely qualified to comment on this situation. He clearly explains how such a recession can happen in any economy following an asset price bubble, and how best to deal with it.

Stress Testing Financial Systems Mr. Paul Louis Ceriel Hilbers 2004-07-01 Stress testing is becoming a widely used tool to assess potential vulnerabilities in a financial system. This paper is intended to answer some of the basic questions that may arise as part of the process of stress testing. The paper begins with a discussion of stress testing in a financial system context, highlighting some of the differences between stress tests of systems and of individual portfolios. The paper provides an overview of the process itself, from identifying vulnerabilities, to constructing scenarios, to interpreting the results. The experience of the IMF in conducting stress testing as part of the Financial Sector Assessment Program (FSAP) is also

discussed.
