Managing Electronic Government

Information in Libraries Andrea M. Morrison 2008-05-27 Delivers the necessary resources librarians can use to connect patrons to specific information via government sites and electronic documents. This guide discusses historical contexts and contemporary issues of electronic government collections. It also includes practical guidance for implementing and improving services.

The Kovacs Guide to Electronic Library Collection Development Diane Kaye Kovacs 2004 Covers how to build an electronic library and how to update and expand it. Each chapter addresses selecting and evaluating web-based resources in subject areas such as business, social science, health, medicine and law, and offers guidelines for an electronic library collection development plan.

Resources in Education 1997

Using the Internet, Online Services & CD-ROMs for Writing Research and Term Papers Charles Harmon 1996 This is a basic guide to researching, writing and documentation for term papers which should be particularly useful for high school and college students. This text explains how to use: the Internet for subject searches, finding the most useful sites for popular topics and printing out hard copies (attention is also paid to browsing the Web and tapping into library resources); CD-ROMs for searching indexes, databases, full-text sources (such as electronic encyclopaedias) and learning about the most helpful CD-ROMs that are generally available; and online services such as America Online, CompuServe and Prodigy efficiently and economically to find information. *Research & Education Networking* 1996-07

Electronic Networks Tharon W. Howard 1999 In spite of all the hype about the Internet and the ways networks are changing the face of education, there is surprisingly little information of pragmatic value to teachers. This book addresses that problem head on. Electronic

Networks is a book written by practicing classroom teachers about actual instructional computing projects in real classrooms. Rather than talk about "the classroom of the future," the authors provide the help teachers need to integrate instructional technologies in their classrooms. They do so by addressing the real problems and real successes of teaching in networked environments. One way to read this book is to look for specific conditions and activities that ensure success with computers. Taken as a whole, the book is an argument for building a human infrastructure at the same pace we are installing computers and writing; for developing effective ways to assess whether students are truly benefiting from technology; and for addressing issues of equitable use.

Internet Connections Mary Engle 1995 This guide is for librarians and library patrons who are not already members of the Internet family of users. It provides: a snapshot of the networking services available at the time of publication; a discussion of the concepts and terms in use; and a bibliography of the notable guides that document the search techniques, navigational tools and information resources available.
