Introduction to Physical Anthropology Robert Jurmain 1994

Evolutionary Politics Glendon A. Schubert 1989 This synthesis of research into the behavior of humans and other social animals ranges horizontally from a congruence of the perspectives of the life sciences, social sciences, and physical sciences and longitudinally from that of the most recent 60 million years, but emphasizing the last 12 thousand years. From a political science perspective, these essays focus on both individual and small-group political behavior. Schubert's work draws extensively on contemporary evolutionary theory, biosocial and psychobiological theory, ethology and primatology, behavioral ecology, experimental work in animal behavior, neurobiology, human development, and the philosophy of both life and social sciences. Introducing and concluding the book are essays that discuss the implications of biology and the life sciences for the study of political science. The others center on five topics: political ethology (naturalistic study of human behavior as animal behavior); political evolution; evolutionary theory; evolutionary development (ecological, epigenetic, and ontogenetic); and the evolution of human thinking.

Student Study Guide to Accompany Human Biology Sylvia S. Mader 2003-08 This best-selling text emphasizes the relationship between humans and other living things. Intended for an introductory course, this text provides students with a firm grasp of how their bodies function and how the human population can become more fully integrated into the biosphere. An Online Learning Center, tied directly to the text via icons, will direct students to activities or animations that gives a "visual example" of difficult processes as well as "Working Together" boxes to emphasize homeostasis.

Bones and Cartilage Brian K. Hall 2005-06-20 Bones and Cartilage provides the most in-depth review ever assembled on the topic. It examines the function, development and evolution of bone and cartilage as tissues, organs and skeletal systems. It describes how bone and cartilage is developed in embryos and are maintained in adults, how bone reappears when we break a leg, or even regenerates when a newt grows a new limb, or a lizard a tail. This book also looks at the molecules and cells that make bones and cartilages and how they differ in various parts of the body and across species. It answers such questions as "Is bone always bone?" "Do bones that develop indirectly by replacing other tissues, such as marrow, tendons or ligaments, differ from one another?" "Is fish bone the same as human bone?" "Can sharks even make bone?" and many more.* Complete coverage of every aspect of bone and cartilage* Full of interesting and unusual facts* The only book available that integrates development and evolution of the skeleton* Treats all levels from molecular to clinical, embryos to evolution* Written in a lively, accessible style* Extensively illustrated and referenced* Integrates analysis of differentiation, growth and patterning* Covers all the vertebrates as well as invertebrate cartilages* Identifies the stem cells in embryos and adults that can make skeletal tissues

The Hawaiian Spinner Dolphin Kenneth S. Norris 1994-08-30 Twenty years in the making by a distinguished dolphin expert and his associates, *The Hawaiian Spinner Dolphin* is the first comprehensive scientific natural history of a dolphin species ever written. From their research camp at Kealakekua Bay in Hawaii, these scientists followed a population of wild spinner dolphins by radiotracking their movements and, with the use of a windowed underwater vessel, observing the details of their underwater social life.

The authors begin with a description of the spinner dolphin species, its morphology and systematics, and then examine the ocean environment, the organization of dolphin populations, and the way this school-based society of mammals uses shorelines for rest and instruction of the young. The dolphins' reproductive cycle, their vision, vocalization, hearing, breathing, and feeding, and the integration of the school are carefully analyzed. The authors conclude with a comprehensive evolutionary analysis of this marine cultural system, with its behavioral flexibility and high levels of cooperation. This absorbing book is the richest source available of new scientific insights about the lives of wild dolphins and how their societies evolved at sea.

Evolution of the Human Diet Peter S. Ungar 2006-10-26 We are interested in the evolution of hominin diets for several reasons. One is the fundamental concern over our present-day eating habits and the consequences of our societal choices, such as obesity prevalent in some cultures and starvation in others. Another is that humans have learned to feed themselves in extremely varied environments, and these adaptations, which are fundamentally different from those of our closest biological relatives, have to have had historical roots of varying depth. The third, and the reason why most paleoanthropologists are interested in this question, is that a species' trophic level and feeding adaptations can have a strong effect on body size, locomotion, "life history strategies", geographic range, habitat choice, and social behavior. Diet is key to understanding the ecology and evolution of our distant ancestors and their kin, the early hominins. A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today. This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors. Paleontologists, archaeologists, primatologists, nutritionists and other researchers all contribute pieces to the puzzle. This volume has at its core four main sections: · Reconstructed diets based on hominin fossils--tooth size, shape, structure, wear, and chemistry, mandibular biomechanics · Archaeological evidence of subsistence--stone tools and modified bones · Models of early hominin diets based on the diets of living primates--both human and non-human, paleoecology, and energetics · Nutritional analyses and their implications for evolutionary medicine New techniques for glean information from fossil teeth, bones, and stone tools, new theories stemming from studies of paleoecology, and new models coming from analogy with modern humans and other primates all contribute to our understanding. When these approaches are brought together, they offer an impressive glimpse into the lives of our distant ancestors. The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns, the unknowns, and the unknowables of the evolution of hominin diets.

Study Guide and Workbook, an Interactive Approach for Starr and McMillan's Human Biology, Third Edition Jane B. Taylor 1999 Asks the student to write all answers in this study guide/workbook. This workbook is interactive because it requires students to do things instead of just read more material. All questions are arranged by chapter modules so students may skip unassigned material. Each module in the study guide refers to the page numbers of the corresponding module in the text. There is a wide variety of questions: multiple-choice questions; tables to be filled in; art to be labeled; true/false questions requiring students to write the correct answer if the statement is false; thought-provoking conceptual questions; boldfaced terms requiring a written definition; list of objectives in fill-in-the-blank format; and other types of questions.

Lewin's Essential Genes Jocelyn E. Krebs 2013 Extensively reorganized and revised with the latest data from this rapidly changing field, *Lewin's Essential GENES, Third Edition*, provides students with a comprehensive overview of molecular biology and molecular genetics. The authors took care to carefully modify the chapter order in an effort to provide a more clear and student-friendly presentation of course material. Chapter material has been updated throughout, including a completely revised chapter on regulatory RNA, to keep pace with this advancing field. The Third Edition's exceptional pedagogy enhances student learning and helps readers understand and retain key material like never before. Concept and

Reasoning Checks at the end of each chapter section, End-of-Chapter Questions and Further Readings sections, as well as several categories of special topics boxes, expand and reinforce important concepts. Towards a Theory of Thinking Britt Glatzeder 2010-03-20 What is Thinking? - Trying to Define an Equally Fascinating and Elusive Phenomenon Human thinking is probably the most complex phenomenon that evolution has come up with until now. There exists a broad spectrum of definitions, from sub- ing almost all processes of cognition to limiting it to language-based, sometimes even only to formalizable reasoning processes. We work with a “medium sized” definition according to which thinking encompasses all operations by which cog- tive agents link mental content in order to gain new insights or perspectives. Mental content is, thus, a prerequisite for and the substrate on which thinking operations are executed. The largely unconscious acts of perceptual object stabilization, ca- gorization, emotional evaluation - and retrieving all the above from memory inscriptions - are the processes by which mental content is generated, and are, therefore, seen as prerequisites for thinking operations. In terms of a differentia specifica, the notion of “thinking” is seen as narrower than the notion of “cognition” and as wider than the notion of “reasoning”. Thinking is, thus, seen as a subset of cognition processes; and reasoning processes are seen as a subset of thinking. Besides reasoning, the notion of thinking includes also nonexplicit, intuitive, and associative processes of linking mental content. According to this definition, thinking is not dependant on language, i. e. also many animals and certainly all mammals show early forms of thinking. Biological Science Biological Sciences Curriculum Study 1996 Introduction to Physical Anthropology Andrew Kramer 2002-08 Each chapter of the study guide features learning objectives, chapter outlines, key terms, extended applications, Internet activities, and practice tests consisting of 25-40 multiple choice questions and 5-10 true/false questions with answers and page references, in addition to several short answer and essay questions.
