Local Government Management Nicolas A. Valcik 2023-04-11 In a recent paradigm shift, local governments find themselves shouldering more responsibility for day-to-day governance and crisis management, thanks to regulations and federal spending cuts. While 20 years ago a book on local government administration might have been considered complete with chapters on budgeting, public personnel management, productivity and responsivity, and community engagement, any discussion of local government must now also include resilience, emergency management, climate change, smart cities, social media, and infrastructure funding. Bringing together key voices from the academic and public sectors, *Local Government Management* offers techniques and insight into

how local government can most effectively lead and manage their resources in an evolving political—and environmental—landscape. Featuring examples from expert contributors' own decades of public service and research, this forward-thinking book explores the rapid speed of change in local communities and the need for local government to not only adapt but also proactively plan for the future. *Local Government Management* is essential reading for local government officials, public stakeholders, practitioners, and students of public administration and management.

An Oral-Formulaic Study of the Qur'an

Andrew G. Bannister 2014-04-24 The Qur'an makes extensive use of older religious material, stories, and traditions that predate the origins of Islam, and there has long been a fierce debate about how this material found its way into the Qur'an. This unique book argues that this debate has largely been characterized by a failure to fully appreciate the Qur'an as a predominately oral product. Using innovative computerized linguistic analysis, this study demonstrates that the Qur'an displays many of the signs of oral composition that have been found in other traditional literature. When one then combines these computerized results with other clues to the Qur'an's origins (such as the demonstrably oral culture that both predated and preceded the Qur'an, as well as the "folk memory" in the Islamic tradition that Muhammad was an oral performer) these multiple lines of evidence converge and point to the conclusion that large portions of the Qur'an need to be understood as

being constructed live, in oral performance. Combining historical, linguistic, and statistical analysis, much of it made possible for the first time due to new computerized tools developed specifically for this book, Bannister argues that the implications of orality have long been overlooked in studies of the Qur'an. By relocating the Islamic scripture firmly back into an oral context, one gains both a fresh appreciation of the Qur'an on its own terms, as well as a fresh understanding of how Muhammad used early religious traditions, retelling old tales afresh for a new audience.

Threat Talk Mary Manjikian 2016-02-24 'Threat Talk' exposes how US and Chinese scientists and policy-makers have understood and responded to the problem of internet addiction in their societies. Is the internet good or bad for society? American analysts like Lessig and Zittrain suggest that the internet is inherently liberating and positive for society, while Morozov and Sageman warn that the internet poses risks to citizens and societies. Using a comparative framework to illustrate how the two states differ

in their assessments of the risks to citizens posed by the introduction of new technology, Mary Manjikian compellingly argues that both 'risk' and 'disease' are ideas which are understood differently at different historic periods and in different cultures. Her culturalist approach claims that the internet is neither inherently helpful, nor inherently threatening. Rather, its role and the dangers it poses may be understood differently by different societies. Is the internet good or bad for society? The answer, it appears, is 'it depends'.

[Homotopy Analysis Method in Nonlinear Differential Equations](#) Shijun Liao 2012-06-22 "Homotopy Analysis Method in Nonlinear Differential Equations" presents the latest developments and applications of the analytic approximation method for highly nonlinear problems, namely the homotopy analysis method (HAM). Unlike perturbation methods, the HAM has nothing to do with small/large physical parameters. In addition, it provides great freedom to choose the equation-type of linear sub-problems and the base functions of a solution. Above all, it provides a convenient way to guarantee the convergence of a solution. This book consists of three parts. Part I provides its basic ideas and theoretical development. Part II presents the HAM-based Mathematica package

BVPh 1.0 for nonlinear boundary-value problems and its applications. Part III shows the validity of the HAM for nonlinear PDEs, such as the American put option and resonance criterion of nonlinear travelling waves. New solutions to a number of nonlinear problems are presented, illustrating the originality of the HAM.

Mathematica codes are freely available online to make it easy for readers to understand and use the HAM. This book is suitable for researchers and postgraduates in applied mathematics, physics, nonlinear mechanics, finance and engineering. Dr. Shijun Liao, a distinguished professor of Shanghai Jiao Tong University, is a pioneer of the HAM.
