## **Flexible Management of Transfer Prices and Multiple Valuation Approach Based upon SAP ERP within the Context of International Controlling**

Cenk Yildirim  
2015-12-01 Master's Thesis  
from the year 2014 in the  
subject Business economics -  
Controlling, grade: 1,7,  
University of Applied Sciences  
Fulda, course: Master of  
International Management,  
language: English, abstract:  
According to the estimations of  
the World Trade Organization,  
sixty percent of the whole  
world trade is being concluded  
within the multinational  
enterprises. This can be put  
down to the fact that  
globalization has had led the  
enterprises separate business  
processes into divisions and

the concept of "profit center"  
has gained currency in this  
regard. As a result of "vertical  
integration" between these  
profit centers, there is an  
enormous volume of exchanged  
goods within multinationals.  
This development in the  
practice gave rise to debates  
on an already existing issue,  
"Transfer Pricing", however,  
from another dimension. The  
inter-company transfer of  
goods has gone beyond the  
domestic boundaries, and  
become an important issue in  
the international context.  
International Transfer Pricing  
can be assumed as an  
opportunity as well as a  
confounding factor from the  
perspective of multinational  
enterprises. On the one side, it  
is possible to move profits  
between individual divisions  
and create tax advantages  
depending on the corporate tax  
rates in different tax  
jurisdictions. On the other side,  
it becomes more complex for

companies to track down the effects of intra-company transfers, evaluate the efficiency of the divisions and the company as a whole and make optimal decisions accordingly. At this point, some academicians propose using a multiple set of books to determine Transfer Prices. In so doing, they argue that managerial requirements can be met and optimal decisions can be reached for the good of the group as a whole. In the light of this information, a software product named SAP® ERP® comes to attention with its unique feature in terms of determining Transfer Prices flexibly. The multiple valuation approach in this system enables the user set Transfer Prices in different valuation techniques, i.e. legal view, group view and profit center view. This study investigates the relationship between these two research objects; thus, aims to verify whether and up to which extent implementing such a system is functional and beneficial by composing Transfer Pricing and

managerial requirements that come along with it.
