**Cognition** Cornelia I. Bargmann 2014 The Proceedings of the 79th Symposium capture many of the tremendous discoveries currently being made by neuroscientists and psychologists working on cognitive processes at scales varying from the molecular to circuit to whole-brain and theoretical studies. Major advances in understanding cognitive function, including learning, memory, language, and decision-making, are being made through the application of powerful new techniques and approaches. The scientific results discussed in this volume shed light on many areas of normal brain function but also offer novel insights into the treatment of psychiatric, neurological, and neurodegenerative diseases. This volume includes state-of-the-art neurobiological research at genetic, molecular, cellular, circuit, and whole brain resolution. Additional chapters address computational neuroscience, behavioral and psychophysical studies, and evolutionary/comparative neuroscience. The Conversations included in this volume are based on interviews conducted during the Symposium and offer a broader anecdotal perspective on this fascinating subject by many of the world's leading cognitive neuroscientists. The Symposium Proceedings provides an integrative overview of the current state of the field as well as a glimpse into the emerging connections between molecular/cellular /circuit mechanisms and higher brain function by leading authorities in the field.

A Literature Review** Nicole Kaczmar 2020-03-18 Bachelor Thesis from the

year 2013 in the subject Business economics - General, grade: 2,0, LMU Munich (Wirtschaftswissenschaften), language: English, abstract: This paper addresses the pressing and rapid shift toward greater sustainability in businesses due to the advanced stage of environmental degradation. The viability and competitiveness of a business is secured through sustainable product innovation development, which has been proven by the latest sustainable products and services. The term sustainability is precisely aligned with sustainable product innovation thinking and processes. In addressing this issue of product sustainability, I provide a concept for fostering sustainable innovation thinking and define certain sustainability criteria linked to each stage of the product innovation process. It has been shown that the reconciliation of sustainable criteria with the product innovation process is challenging. Limitations arising from sustainable product innovation development, such as greenwashing are discussed and reveal that the concept of sustainability has not been implemented properly in business practice so far. In particular, there is also a lack of scientific studies regarding the holistic approach to sustainable product innovations. Generally, fundamental innovation theories need to be improved by sustainability criteria, because keeping up with the sustainability trend will be one of the most challenging and important tasks in the future for businesses to maintain their competitiveness.
