Matthew effect in science 2022-11-09 Seminar paper from the year 2021 in the subject Psychology - Industrial and organizational psychology, grade: 1.7, University of Kassel, course: Economics of Science & Technology, language: English, abstract: Merton (1968) was first to coin

the term „Matthew effect“, a phenomenon which describes the fact, that scientist of a higher status will receive more credit for similar work than scientists of comparatively lower status would receive. The research in this field has expanded to more areas than the scientific community, for example to sports careers or education and is often casually described with the phrase “the rich get richer and the poor get poorer”. During this work, the focus will lay on the scientific community. The particular topic of interest is the interaction between status effects, prize winning and citations as a form of perceived quality. Starting with an introduction to the theoretical background of the Matthew effect in science, we will learn that there are two components to the Matthew effect, namely the “reward system” and the “communication system”. In the following empirical part of the paper, we will first take an extensive look at a study which examines whether a status shock triggers a citation boost for the awarded scientist. The results will show a citation premium following the awarding of the scientist, but the effect is limited in time and strongest on recent productions. Afterwards, studies with similar topics, namely the Matthew effect in relation to citations or prize winning, will be reviewed. Finally, a discussion on the research state regarding the Matthew effect is warranted. It will become clear that research in relation to this topic must overcome some hurdles. The measurement of status and quality, both variables who are anchored in the Matthew effect, is difficult. Furthermore, the question of cause and effect between status and delivered quality needs to be addressed. This work ends with a conclusive section and a possible outlook for future research.

**Contextualizing Systems Biology** Martin Döring 2015-12-18 This collective monograph aims at contributing to an improved understanding of the epistemic presumptions, sociocultural implications and historically backgrounds of the newly emerging and currently expanding approach of

systems biology. In doing so, it offers empirically grounded, valuable and reflexive information about a paradigmatic shift in the biosciences for a wide range of scientists working in the interdisciplinary areas of systems biology, synthetic biology, molecular biology, biology, the philosophy of science, the sociology of science and scientific knowledge, science and technology studies, technology assessment and the like. The authors of this monograph share the theoretical methodological premise that science is a culturally and socially embedded practice which characterizes our culture as a scientific one and at the same time draws its innovative potential from its socio-cultural context. This dialectic relationship lies at the heart of the current development of systems biology which is conceived as a so-called successor of '-omics' research and triggered by high-throughput information technologies. At the same time a need for a holistic conceptualization of complex biological processes emerges. The title *Contextualizing Systems Biology* suggests that this book analyzes the development and advent of systems biology from different theoretical and methodological perspectives. We investigate a variety of contexts ranging from the analysis of cognitive contexts (such as basic theoretical concepts) to regulative contexts (policies) to the concrete application of a systems biology in the socio-scientific context of a European research project. In empirically analyzing these different and interrelated layers and dimensions of systems biology, the scope of the book goes beyond present attempts to investigate the advent of new approaches in the biological sciences as it frames and assesses systems biology from an interdisciplinary and integrated perspective.

**Our Psychiatric Future** Nikolas Rose 2018-11-26 Our everyday lives

are increasingly intertwined with psychiatry and discussions of mental health. Yet the dominant medical discipline of psychiatry remains surrounded by controversy. Is mental distress really an illness like any other, treatable by drugs? Can psychiatrists differentiate between mental disorders normal eccentricities, anxieties or even sadness? Should the power of psychiatrists be challenged by the knowledge of those with lived experience of mental ill health? In this penetrating analysis, Nikolas Rose critiques the powerful part that psychiatry has come to play in the lives of so many across the world. A series of chapters, each tackling an area of dispute head on, opens wide the terrain of debate addressing issues such as advances in brain science, the politics of Western psychiatry's spread across the globe, and recent evidence of social adversity's role in producing mental ill health. The answers we find to these pressing questions will shape the psychiatric futures that are being brought into existence. Ultimately, this book proposes a radically different future, no less evidence-based or rigorous, and indeed far more attuned to the realities of mental health, and argues that, as a branch of social medicine, another psychiatry is possible.

Intellectual Property Issues in Life Sciences Chetan Keswani 2024-11-15  
Intellectual Property Issues in Life Sciences: Disputes and Controversies highlights emerging legal, social, and regulatory issues pertaining to various areas of life sciences. Patents occupy a prominent position in the innovation systems in the life sciences, but to what extent they support, or hinder innovation is widely disputed. Life science is a broad subject including agriculture, ecology, microbiology, plant and animal sciences, health and diseases, biotechnology, etc. However, despite the broad applications of biotechnology and molecular biology techniques, profits on investments are surprisingly low. Thus, it is vitally important for universities, public research organizations, and private enterprises to protect their innovations. There are vast differences of opinion on patentability of living organisms, which are largely barred from patent

protection. However, mind-sets are rapidly shifting and IP issues in life sciences are receiving increasing attention. To compete with progressive bio-based economies the developing countries are amending their IP laws to encourage investment. An effort has been made to avoid considering policy in isolation, but rather to emphasize the interplay between the policy mix, the wider institutional setting, market forces, and system organization solutions. Both empirical and conceptual chapters are included to bring them together and to yield facts and interpretations for the readers. This book presents expert opinions by frontier academicians, researchers, and attorneys on the recent challenges in the rapidly evolving life science industry. The present book offers comprehensive knowledge on the contemporary issues in life sciences to a wide range of audiences including students, scholars, researchers, legal practitioners, policymakers, and others interested in emerging intellectual property issues. Features The only compilation available on the contemporary intellectual property issues in life sciences in the post-COVID era. Focuses on the commercial, regulatory, bioethical, and socio-legal implications of patents in life sciences. Describes an integrated approach for sustained innovations in various areas of life sciences. Discusses the recent IP controversies in a pan-global context. Presents viewpoints to front-line practitioners, viz attorneys, researchers, etc.
