The De Gruyter Handbook of

Automated Futures Vaike

Fors 2024-09-23 How does

automation affect us, our

environment, and our

imaginings? What actions

should we take in response to

automation? Beyond grand

narratives and technology-

driven visions of the future,

what more can automation

offer? With these questions in

mind, The De Gruyter

Handbook of Automated

Futures provides a framework

for thinking about and

implementing automation

differently. It consolidates

automated futures as an inter-

and transdisciplinary research

field, embedding the

imaginaries, interactions, and

impacts of automation

technology within their social,

historical, societal, cultural,

and political contexts.

Promoting a critical yet

constructive and engaging

agenda, the handbook invites

readers to collaborate with

rather than resist automation

agendas. It does so by pushing

the agenda for social science,

humanities and design beyond

merely assessing and

evaluating existing

technologies. Instead, the

handbook demonstrates how

the humanities and social

sciences are essential to the

design and governance of

sustainable sociotechnical

systems. Methodologically, the

handbook is underpinned by a

pedagogical approach to

staging co-learning and co-

creation of automated futures

with, rather than simply for,

people. In this way, the

handbook encourages readers

to explore new and alternative modes of research, fostering a deeper engagement with the evolving landscape of automation.
