The ASCRS Manual of Colon and Rectal Surgery David E. Beck 2009-06-12 The ASCRS Textbook of Surgery of the Colon and Rectum offers a comprehensive textbook designed to provide state of the art information to residents in training and fully trained surgeons seeking recertification. The textbook also supports the mission of the ASCRS to be the world's authority on colon and rectal disease. The combination of junior and senior authors selected from the membership of the ASCRS for each chapter will provide a comprehensive summary of each topic and allow the touch of experience to focus and temper the material. This approach should provide the reader with a very open minded, evidence based approach to all aspects of colorectal disease. Derived from the textbook, *The ASCRS Manual of Surgery of the Colon and Rectum* offers a "hands on" version of the textbook, written with the same comprehensive, evidence-based approach but distilled to the clinical essentials. Yamada's Textbook of Gastroenterology Daniel K. Podolsky 2015-10-13 Yamada's Textbook of Gastroenterology has for 20 years been the most comprehensive gastroenterology reference book, combining an encyclopaedic basic science approach to GI and liver disease with the latest clinical thinking, especially in diagnostic and therapeutic developments. It is universally respected across the globe. The original outstanding editorial team was led by Tadataka Yamada, MD, one of the world's leading figures in GI research. As in previous editions, the new textbook reflects the collective efforts of the editors and a hugely impressive team of contributors, who are each experts in their specific areas. Now with another world leader in gastroenterology as Editor-in-Chief, Daniel K. Podolsky MD, President and Professor of Internal Medicine at the University of Texas Southwestern Medical Center, together with a stellar group of associate editors, the 6th edition of this iconic textbook has been expanded and enhanced in many ways with new content and technology.

New Frontiers in Gene-Modified T Cell Technology Ignazio Caruana 2024-06-13 The development, clinical translation and recent efficacy of novel gene therapies targeting refractory malignancies has led to research that extends this technology to a variety of infectious and rheumatological diseases. Unlike conventional drugs or antibodies, T cells have the potential to target and exert effector function in response to disease in a dynamic manner, acting as a "living drug". The most efficacious form of gene-modified T cells to date is the chimeric antigen receptor (CAR)-modified T cell, which redirects the specificity of T cells to an antigen expressed by tumor cells. Clinical experience with autologous CAR-T cells, primarily in hematologic malignancies, has

underscored the feasibility and safety of the approach, while also demonstrating dramatic and sustained antitumor effects through mechanisms orthogonal to those of traditional anticancer therapies. However, several challenging obstacles must be surmounted in order to improve the broader efficacy of this approach.

Colorectal Cancer: Molecular Mechanisms, Premalignant State and Its Prevention W. Schmiegel 1999-04-30

Colorectal cancer is one of the most common causes of tumour-associated death in Western countries, and its incidence has been increasing in recent decades. The most important determinant for the course of the disease is tumour stage at the time of diagnosis. The detection of molecular changes in tumour tissue and in benign adenomatous polyps has improved our knowledge of colorectal carcinogenesis. Diseases with a high risk for malignant transformation, as well as family predisposition as an independent risk factor, have been identified. Furthermore, dietary and environmental factors, together with the intake of aspirin and other NSAIDs, influence tumor development. This implies new ways of specific testing for early diagnosis and new prevention strategies based on endoscopy and drug therapy. The main topics of this book, the proceedings of the international Falk Symposium No. 109, held in Titisee, Germany, on October 14-15, 1998, are molecular mechanisms, premalignant state and prevention. State-of-the-art chapters deliver the latest scientific developments on every topic, followed by more detailed chapters on specific items.
