Corrections Sergeant John H. Kingsbury 1983 Development of Human Factors Guidelines for Advanced Traveler Information Systems (ATIS) and Commercial Vehicle Operations (CVO) 1996 A comparable systems analysis was performed on seven systems selected for their relevance to the features and functions of the Advanced Traveler Information Systems (ATIS) and Commercial Vehicle Operations (CVO) components of the Intelligent Transportation Systems (ITS) program. The seven systems were selected for their relevance to ATIS/CVO concepts, user time-sharing characteristics,

technology level, dynamics of information flow, level of implementation, and accessibility. Five of the systems were highway transportation or CVO in-vehicle information systems, two were comparable systems featuring advanced navigation and decision aiding in Army aviation. Analyses of the seven systems resulted in human factors lessons learned. The lessons learned were compiled into preliminary human factors design guidelines for ATIS/CVO.

The New Walford Guide to Reference Resources

Ray Lester 2005 *The New Walford* highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, *The New Walford* naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might, *The New Walford* subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature. This ensures that *The New Walford* is clear, easy-to-use and intuitive. - Publisher.

Unraveling Immune Metabolism: Single-Cell & Spatial Transcriptomics Illuminate

Disease Dynamics Yejun Tan 2026-02-11 The integration of single-cell and spatial transcriptomics with advanced metabolic profiling tools has revolutionized the study of immune metabolism, particularly in the context of immune-related disorders. These cutting-edge techniques have provided unprecedented insights into the cellular mechanisms that drive disease processes, offering detailed views of cellular behavior and interactions at an individual cell level. Despite these advancements, a significant gap remains in our understanding of how immune cells adapt their metabolic processes in dynamic disease environments. Recent studies utilizing tools such as single-cell Flux Estimation Analysis (scFEA), the Metabolic Cost model (Mebocost), and single-cell Metabolism (scMetabolism) have begun to address these challenges by dissecting the metabolic activities of immune cells. These

technologies reveal how metabolic reprogramming within immune cells supports or inhibits disease processes. However, the application of these technologies to explore the metabolic underpinnings of immune cell function across a range of immune-related disorders is still emerging. These conditions, characterized by complex metabolic rewiring that supports disease persistence and resistance to treatments, require sophisticated analyses that capture both the static state of immune cell metabolisms and their evolution over time and in response to therapy. This research topic aims to bridge these gaps by applying cutting-edge single-cell and spatial transcriptomics tools, coupled with metabolic profiling technologies like scFEA, Mebocost, and scMetabolism. Our goal is to comprehensively map the metabolic pathways that govern immune cell functions across various immune-related disorders. We seek to explore how immune cells modify their metabolic pathways during disease progression, how these metabolic shifts influence disease outcomes, and how metabolic intervention could alter the course of these disorders. By focusing on a broad spectrum of immune-related diseases, this collection hopes to uncover new metabolic targets for therapy and enhance our understanding of the tissue-specific metabolic interactions that dictate immune cell function and disease progression. To gather further insights into the metabolic dynamics of immune cells across various immune-related diseases, we welcome articles addressing, but not limited to, the following themes: - Comprehensive Metabolic Profiling: Detailed analyses of immune cell metabolism using scFEA, Mebocost, and scMetabolism. - Disease-Specific Metabolic Insights: Studies on how metabolic pathways differ among various immune-related diseases. - Therapeutic Implications: Exploration of potential metabolic targets for innovative treatment strategies.
