The Oxford Handbook of Genetic Counseling Michael J. Deem 2025-09-23 Genetic counseling is one of the fastest growing fields across clinical care, medical research, and health-related industries. This growth is driven by advancements in genetic knowledge, the expansion of genetic tests and sequencing tools, industry demands for new testing modalities, and a public interest in direct-to-consumer genetic testing. As the field continues to expand and diversify, *The Oxford Handbook of Genetic Counseling* is the most comprehensive and authoritative resource designed to meet the demands of a growing workforce. The volume contains thirty-six chapters that cover historic developments, application in clinical practice, research and industry, and genetic and genomic testing. The book also discusses ethical and social issues and provides an outlook on the future of the field. Bringing together an interdisciplinary team that includes genetic counselors, clinical geneticists, medical researchers, bioethicists, legal and policy experts, and other healthcare professionals, this volume is an invaluable resource for professionals in the field. It appeals to genetic counselors, genetic counseling students, teachers, scholars, and bioethicists. Given its scope and diversity of topics, it is also an important resource for clinical faculty, health researchers, and healthcare providers who are increasingly encountering genetics and genomics in their respective fields.

Neurocutaneous Disorders Christos P. Panteliadis 2022-02-03 This book provides extensive data on the more common and many of the more rare congenital and hereditary syndromes that manifest in the nervous system and skin. Though often complex and multi-systemic, these disorders can frequently be diagnosed using a combination of simple visual inspection and sound clinical expertise. Drawing on fully referenced information from thousands of articles, the international editorial team has prepared a comprehensive overview that includes historical perspectives, clinical features, the pathogenesis, and diagnostic and therapeutic strategies. In addition, it addresses the biochemical, molecular, and genetic basis of the disorders. The book is divided into four main sections. Starting with general aspects of aetiology, diagnostics and therapy, the first part then covers the genetics, neuro-imaging, neuropathology, ocular manifestations and surgical management. The second part discusses developmental malformations, such as Sturge-Weber syndrome, Ataxia-Telangiectasia, Hypomelanosis of Ito and other rare syndromes, including haemangiomas. The focus of the third part is on tumour suppressor/DNA repair disorders, the most common of which is Neurofibromatosis 1. It also describes Neurofibromatosis 2, Schwannomatosis, Tuberous sclerosis, von Hippel-Lindau disease, Naevoid basal cell carcinoma and others. The book's fourth and final section covers defects in enzymes and structural proteins, which manifest as Cerebrotendinous xanthomatosis, Ehlers-Danlos syndrome, Menkes syndrome, Refsum disease.
