**Why Was Man Created?** Sam Oputa 2016-10-11 "In the beginning, God created the earth, and He looked upon it in His cosmic loneliness. And God said, "Let Us make living creatures out of mud, so the mud can see what We have done." And God created every living creature that now moveth, and one was man. Mud as man alone could speak. God leaned close to mud as man sat up, looked around, and spoke. Man blinked. "What is the purpose of all this?" he asked politely. "Everything must have a purpose?" asked God. "Certainly," said man. "Then I leave it to you to think of one for all this," said God. And He went away." - Kurt Vonnegut, *Cat's Cradle* Most people must have at one point or another asked themselves the question, why am I here? One thing is certain--we were not here from the beginning. Some have asked questions like "What is life all about?" Many others have wondered "What is the nature of life?" and "What is the nature of reality?". These questions can be a passing thought that launches into a full-on existential exploration. What are we anyway? We are born. We grow into adults and before you can bat an eyelid, you are in the old people's home waiting to die. How fulfilling is that? Do you now wonder why some people ask the question "What are we here for anyway?" Some great people have asked these questions. "What is my purpose?" It is a difficult and profound question, and a common conclusion is that we were created for God's glory. That may be a religious truth but is it logical? There must be a far more specific reason for our creation. In Sam Oputa's *Why Was Man Created?* he explores this question from many angles--spirituality, religion, psychology, philosophy, and other sciences--but mostly he draws from the Holy Books, which contain a wealth of scientific evidence. The result of years of research and soul-searching *Why Was Man Created?* is a fascinating and sometimes controversial study of the age-old question of creation and evolution. The answers to these questions are not easy to resolve but the answers are out there.

**Intelligent Systems** Crina Grosan 2011-07-29 Computational intelligence is a well-established paradigm, where new theories with a sound biological understanding have been evolving. The current experimental systems have many of the characteristics of biological computers (brains in other words) and are beginning to be built to perform a variety of tasks that are difficult or impossible to do with conventional computers. As evident, the ultimate achievement in this field would be to mimic or exceed human cognitive capabilities including reasoning, recognition, creativity, emotions, understanding, learning and so on. This book comprising of 17 chapters offers a step-by-step introduction (in a chronological order) to the various modern computational intelligence tools used in practical problem solving. Staring with different search techniques including informed and uninformed search, heuristic search, minmax, alpha-beta pruning

methods, evolutionary algorithms and swarm intelligent techniques; the authors illustrate the design of knowledge-based systems and advanced expert systems, which incorporate uncertainty and fuzziness. Machine learning algorithms including decision trees and artificial neural networks are presented and finally the fundamentals of hybrid intelligent systems are also depicted. Academics, scientists as well as engineers engaged in research, development and application of computational intelligence techniques, machine learning and data mining would find the comprehensive coverage of this book invaluable.
