Instructor's Guide and Testbank for Medical Terminology with Human Anatomy Jane Rice 1994-12

Medical-surgical Nursing Examination Review George Horemis 1973

Medical Terminology with Human Anatomy Jane Rice 2005 The fifth edition of *Medical Terminology with Human Anatomy* continues its tradition of excellence with a new and refreshed approach to covering all aspects of medical terminology. This revised edition embraces the philosophy that has made the book so successful, and incorporates fresh new features that will be sure to engage readers of all learning styles. FEATURES THAT PROMOTE SUCCESS INCLUDE: Organized by body system—learners are able to easily locate all relevant anatomy, physiology, pathology, and medical terminology in the same chapter. Word Building approach features an enhanced feature called Building Your Medical Vocabulary, which presents all words related to the body system, including pathological terms, in one list. Readers can learn about medical words that are built from word parts, with their component parts clearly presented, at the same time as vocabulary words. Focused pathology coverage, with two NEW features: Pathology Spotlights, which highlight common conditions, and Pathology Checkpoints, which provide the student with a concise list of pathology terms they have encountered in the chapter. Terminology Translator, a NEW feature on the FREE CD-ROM, provides an innovative tool to translate medical words into Spanish, French, and German. Lifespan Considerations discuss issues related to children and adults. Drug Highlights present essential drug information related to the chapter content.

The Cardiovascular System Alan Noble 2005 A textbook on the cardiovascular system for medical students, offering an integrated coverage of the basic science and major diseases of the system. Integrated coverage of the structure, function and major diseases of the cardiovascular system - highly suitable for systems courses as taught in the new medical curriculum. Coverage of the basic science is clinically driven - a common clinical presentation introduces each major topic. Clinical cases are used and explained in the chapter rather than merely being present to provide additional interest. Coverage of major diseases of the cardiovascular system equips students for the contact with patients which now occurs much earlier in the medical course. Attractive, open two colour page design with objectives defined at the start of each chapter and self-assessment at the end.
