The Missionary Review of the World 1900

Sex Equality Emmet Densmore 1907

Scientific American 1912 Monthly magazine devoted to topics of general scientific interest.

Fit to Be Tied Rebecca M. Kluchin 2011 The 1960s revolutionized American contraceptive practice. Diaphragms, jellies, and condoms with high failure rates gave way to newer choices of the Pill, IUD, and sterilization. *Fit to Be Tied* provides a history of sterilization and what would prove to become, at once, socially divisive and a popular form of birth control. During the first half of the twentieth century, sterilization (tubal ligation and vasectomy) was a tool of eugenics. Individuals who endorsed crude notions of biological determinism sought to control the reproductive decisions of women

they considered "unfit" by nature of race or class, and used surgery to do so. Incorporating first-person narratives, court cases, and official records, Rebecca M. Kluchin examines the evolution of forced sterilization of poor women, especially women of color, in the second half of the century and contrasts it with demands for contraceptive sterilization made by white women and men. She chronicles public acceptance during an era of reproductive and sexual freedom, and the subsequent replacement of the eugenics movement with "neo-eugenic" standards that continued to influence American medical practice, family planning, public policy, and popular sentiment.

Human Heredity Michael R. Cummings 1997

This introduction to human heredity/genetics for the non-science major requires no previous

exposure to biology, chemistry, or mathematics. It covers the latest research and technological advances in human genetics and the implications of this knowledge on the human condition (social, cultural, and ethical). Now full-color throughout, the Fourth Edition includes significant content revision and features chapter opening prologues, more clinical material woven throughout the text, and less technical jargon. Short case studies and Internet activities end many chapters, and end-of-chapter exercise sets are new.

Modules McDougal Littell Incorporated 2005

Genetics & Human Heredity John Ben Hill 1955 The biological background of genetics; Mendelian principles; Linkage and crossing over; Actions and interactions of genes in development of heritable characters; Influence of multiple genes in development; Biometry the statistics of genetics; Variations and germinal changes; Sex determination and sexual types; Twins and human heredity.

Structure and Function of the Human Body

Barbara Janson Cohen 2000 This abridged version of Memmler's The Human Body in Health and Disease includes information on normal anatomy and physiology. New to this edition is a beautifully revised design and art program that will engage students and better help them learn anatomy. New content includes "Word Derivations" sections that promote recognition of scientific terms, "Health Professions" boxes that provide information on the various health careers for which students may be training, and new types of end-of chapter questions. A back-of-book CD-ROM for students with an image atlas and audio pronunciation glossary is included. Online courses for use with WebCT and Blackboard are also available. LiveAdvise online student tutoring and faculty support come as a bonus with every text. Please visit <http://connection.lww.com/liveadvise> for more information.

A Culture of Improvement Robert Friedel
2010-02-26 How technological change in the West has been driven by the pursuit of improvement: a history of technology, from plows and printing presses to penicillin, the atomic bomb, and the computer. Why does technology change over time, how does it change, and what difference does it make? In this sweeping, ambitious look at a thousand years of Western experience, Robert Friedel argues that technological change comes largely through the pursuit of improvement—the deep-rooted belief that things could be done in a better way. What Friedel calls the "culture of improvement" is manifested every day in the ways people carry out their tasks in life—from tilling fields and raising children to waging war. Improvements can be ephemeral or lasting, and one person's improvement may not always be viewed as such by others. Friedel stresses the

social processes by which we define what improvements are and decide which improvements will last and which will not. These processes, he emphasizes, have created both winners and losers in history. Friedel presents a series of narratives of Western technology that begin in the eleventh century and stretch into the twenty-first. Familiar figures from the history of invention are joined by others—the Italian preacher who described the first eyeglasses, the dairywomen displaced from their control over cheesemaking, and the little-known engineer who first suggested a grand tower to Gustav Eiffel. Friedel traces technology from the plow and the printing press to the internal combustion engine, the transistor, and the space shuttle. Friedel also reminds us that faith in improvement can sometimes have horrific consequences, as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide. The most comprehensive

attempt to tell the story of Western technology in many years, engagingly written and lavishly illustrated, *A Culture of Improvement* documents the ways in which the drive for improvement has shaped our modern world.

Journal of the American Medical

Association 1913 Includes proceedings of the association, papers read at the annual sessions, and lists of current medical literature.

British Sociology's Lost Biological Roots Chris Renwick 2012-01-25 A new and innovative account of British sociology's intellectual origins that uses previously unknown archival resources to show how the field's forgotten roots in a late nineteenth and early twentieth-century debate about biology can help us understand both its subsequent development and future potential.

Principles of Genetics D. Peter Snustad 2016-01-04 *Principles of Genetics* is one of the most popular texts in use for the introductory course. It opens a window on the rapidly

advancing science of genetics by showing exactly how genetics is done. Throughout, the authors incorporate a human emphasis and highlight the role of geneticists to keep students interested and motivated. The seventh edition has been completely updated to reflect the latest developments in the field of genetics. *Principles of Genetics* continues to educate today's students for tomorrow's science by focusing on features that aid in content comprehension and application.

Carolyn J. Meyer 2000

The Origins of Nazi Genocide Henry Friedlander 2000-11-09 Tracing the rise of racist and eugenic ideologies, Henry Friedlander#### explores in chilling detail how the Nazi program of secretly exterminating the handicapped and disabled evolved into the systematic destruction of Jews and Gypsies. He describes how the so-called euthanasia of the handicapped provided a

practical model for the later mass murder, thereby initiating the Holocaust. The Nazi regime pursued the extermination of Jews, Gypsies, and the handicapped based on a belief in the biological, and thus absolute, inferiority of those groups. To document the connection between the assault on the handicapped and the Final Solution, Friedlander shows how the legal restrictions and exclusionary policies of the 1930s, including mass sterilization, led to mass murder during the war. He also makes clear that the killing centers where the handicapped were gassed and cremated served as the models for the extermination camps. Based on extensive archival research, the book also analyzes the involvement of the German bureaucracy and judiciary, the participation of physicians and scientists, and the nature of popular opposition.
