Risk-Based Tax Audits Munawer Sultan Khwaja 2011-06-08 "Revenue administration is a major interface between the state and its citizens. A good revenue administration is, therefore, an important attribute of good government. As a result, in recent years, policy makers have become increasingly aware of the importance of policies that will promote business development while ensuring voluntary tax compliance. In the modern context, it is neither desirable nor feasible to examine or inspect every single taxpayer. The revenue administration, therefore, has to rely on effective management of compliance. Promoting voluntary compliance, achieved through a self-assessment system in which taxpayers comply with their tax obligations without intervention from tax officials, requires developing modern approaches to audits based on risk management. The impact of audits critically depends on a

properly designed audit selection strategy focused on high-risk taxpayers to provide the most cost-effective outcome. This, in itself, contributes to promoting voluntary compliance. Risk-based country audits: approaches and country experiences are an important study of this critical revenue function of compliance management."--Publisher's website.

AI Nation Rising Michael T. Murphy 2026-02-26 The definitive technical and strategic reference for AI deployment in defense, governance, and critical industrial systems. At 1,700 pages and over a million words, it equips defense contractors, policymakers, law enforcement, and cybersecurity professionals with the systems knowledge and strategic frameworks to deploy AI where the consequences of failure are highest. We are living through the most consequential technological transition in modern history. Artificial intelligence is no longer confined to research laboratories — it is actively reshaping national defense doctrine, democratic

governance, law enforcement, and industrial civilization. Nations that deploy AI with strategic clarity will define the global order. Those that do not will navigate a world shaped by decisions they had no part in making. AI Nation Rising is the definitive technical and strategic reference for the practitioners, planners, and policymakers who bear responsibility for getting this right. At 1,700 pages spanning thirty-one chapters, it is the most comprehensive treatment of mission-critical AI deployment ever assembled in a single work — written for defense contractors, intelligence analysts, government policymakers, law enforcement investigators, cybersecurity professionals, and industrial leaders operating at the intersection of technology and consequence. The book opens with rigorous grounding in foundational AI systems — supervised, unsupervised, and reinforcement learning paradigms; transformer-based large language models; distributed data infrastructure; and privacy-preserving techniques including federated learning and differential privacy. For a defense contractor assessing platform capabilities, a policymaker evaluating vendor claims, or a systems integrator designing classified infrastructure, this foundation is not academic. It is operational. Part III — the heart of the book — provides exhaustive coverage of AI in defense, national security, forensic science, and law enforcement. Defense professionals will find authoritative treatment of strategic AI infrastructure, cyber defense and information warfare, counter-disinformation systems, and critical infrastructure protection. Military intelligence chapters address the full ISR pipeline, from satellite imagery automation and SIGINT processing to biometric identification and HUMINT support. Tactical applications cover autonomous combat systems, automatic target recognition, swarm coordination, and battlefield logistics. The naval chapters address Aegis combat system integration, submarine detection, anti-ship missile defense, and autonomous surface and underwater vehicles. Law enforcement professionals will find deep coverage of digital forensics, cryptocurrency crime investigation, crime scene reconstruction, trace evidence analysis, and judicial AI — including deepfake detection and evidence authentication. Parts IV and V extend this rigor

across democratic governance, biomedical AI, earth sciences, space exploration, manufacturing, and financial services — from election integrity monitoring and political risk modeling, to drug discovery, pandemic response, precision agriculture, geospatial intelligence, and regulatory compliance. Throughout, the book treats deployment challenges, integration constraints, and failure modes as central subjects, not footnotes. Each domain includes analysis of near-term evolution trajectories, reflecting the reality that today's architectural decisions will shape AI capability for a decade. The closing section addresses ethics, global regulatory frameworks, and societal implications with the same analytical seriousness brought to every technical chapter. AI Nation Rising is written in full recognition of the stakes. The decisions being made today about AI in defense, governance, and critical infrastructure will shape the security and sovereignty of nations for generations — and they deserve to be informed by the best available understanding of what these technologies can do, and what it genuinely takes to deploy them where failure is measured not in wasted resources, but in lives, freedoms, and the integrity of civilized society.
