**Wind Energy Conversion 1992** British Wind Energy Association. Conference 1992 Having sited the conference where, even in July, they had a good chance of being able to test theories on a moment's notice, contributors from a wide range of disciplines consider not only the economic and engineering parameters of wind energy, but also the contentious issues of noise, visual impact, and aesthetics that have often accompanied the implementation or attempted implementation of wind farms in economically and politically marginalized regions of Britain. One of the three keynote addresses holds an olive branch to environmentalists. The other 45 papers cover overviews and perspectives, windfarm design and construction, power quality, wind turbine philosophies, autonomous systems, standards, design methods, technical tools, components, planning, visual and aesthetic considerations, noise issues, non-UK markets financing and economics, market and industrial opportunities in the UK, and integrating wind energy into the grid. **Corpus-based Translation of Private Legal Documents** Patrizia Giampieri 2024-06-15  
Legal translation is hallmarked by peculiarities revolving around language intricacies, particular formulae, and system-specificity issues. At present, there is a spectrum of legal corpora dedicated to court-related topics and legislation, but there is no corpus composed of private legal documents such as contracts and agreements. This book wishes to bridge this gap by providing English-Italian comparable corpora related to the domain of (general) terms and conditions of service, together with a model for their use in the translation classroom. It offers a novel contribution to the scientific community as it makes corpora of private legal documents available for consultation. In addition, it shows that legal corpora built by following rigorous methods can become reliable tools in translator training and, most likely, in translation practice. This book is for students in Translation Studies,

professional translators, researchers and scholars in legal language and legal translation, as well as legal practitioners and lawyers.

**Making Deep Maps** David J. Bodenhamer  
2021-09-28 This book explores how we create deep maps, delving into the development of methods and approaches that move beyond standard two-dimensional cartography. Deep mapping offers a more detailed exploration of the world we inhabit. Moving from concept to practice, this book addresses how we make deep maps. It explores what methods are available, what technologies and approaches are favorable when designing deep maps, and what lessons assist the practitioner during their construction. This book aims to create an open-ended way in which to understand complex problems through multiple perspectives, while providing a means to represent the physical properties of the real world and to respond to the needs of contemporary scholarship. With contributions from leading experts in the spatial humanities, chapters focus on the linked layers of quantitative and qualitative data, maps, photographs, images, and sound that offer a dynamic view of past and present worlds. This innovative book is the first to offer these insights on the construction of deep maps. It will be a key point of reference for students and scholars in the digital and spatial humanities, geographers, cartographers, and computer scientists who work on spatiality, sensory experience, and perceptual learning.
