Diet Behavior and Heart Health

Yong Zhao 2024-03-06 The association between diet and health has been identified, and a healthy diet can help prevent various cardiovascular diseases (CVD). Dietary behaviors and dietary patterns are changing, especially in developing countries; with the ever-increasing amount of processed food and changing lifestyles, people eat more foods rich in energy, fat, free sugars, and salt, but not enough in fruits, vegetables, and other dietary fibers. CVD, including coronary heart disease, heart failure, stroke, and hypertension, are the leading cause of mortality worldwide. Poor dietary behaviors and patterns are risk factors for the continuing increase of CVD incidence, accounting for more than 11 million deaths.

Dietary and Nutritional Indices

and Chronic Diseases Sorayya

Kheikouri 2024-03-06 Chronic

diseases such as diabetes,

cardiovascular diseases, and

cancers are known as a

substantive worldwide challenge for health systems and are major contributors to mortality and morbidity. According to the World Health Organization, 71% of all deaths and 63.8 % of Disability-Adjusted Life Years (DALYs) are attributed to chronic diseases. The composition of a diet influences health status and affects the occurrence and severity of chronic diseases. As different components of a diet correlate and interact with one another, addressing only individual dietary constituents does not usually help in analyzing the extent to which diets may prevent or contribute to the development or progress of chronic diseases. In recent years, the concept of dietary indices has received more attention by both researchers and clinicians and is used as a means to capture the overall effect of a diet on a specific disease or a group of related illnesses. These indices are nutritionally derived mathematical algorithms which are developed on the bases of useful or detrimental nutrients

and/or food groups. Thus, the indices are frequently used to elucidate proper aspects of a specific diet such as quality; diversity; anti-inflammatory, anti-oxidative, and/or anti-glycation potential; and acid load. Examples include the: dietary inflammatory index (DII), dietary total antioxidant capacity (DTAC), healthy eating index (HEI), dietary acid load, and so forth. There is accumulating evidence indicating a link between scores of dietary and nutritional indices and health outcomes.

participation opportunities for individuals with impairments are increasing. Whether an athlete is beginning a sport or competing on the world stage for a podium finish, nutrition is recognized as being integral to optimizing their health, training capacity, and performance. Some athletes with impairments are physiologically similar to their able-bodied counterparts, whereby the application of sports nutrition principles is straightforward. However, athletes with certain impairments require a very individualized approach when applying these principles in a practical way. Fully updated and expanded, this second edition of Sports Nutrition for Paralympic Athletes is an essential resource for sports nutrition practitioners who work alongside athletes with an impairment, whether that be physical, visual, hearing, or intellectual. In addition to chapters devoted to each

impairment type, this book covers specific areas including medical considerations, body composition, supplements, and practical aspects that can be applied across all athletes and sports. Case studies and messages from athletes and world-class coaches enhance the application of theoretical research into practice providing the most relevant sports nutrition advice to Para athletes. Features New chapters on energy availability in Para athletes and cooling and hydration for the Para athlete Concise review of current sports nutrition recommendations for athletes, both during training and in competition Provides practical guidance and examples on how to apply sports nutrition principles to each impairment type Includes real life experiences of Para athletes, elite coaches, and practitioners Encompasses wider topics of assessing body composition, medical considerations, and supplement use specific to Para athletes Features insight and experiences gained by

Blood Lead Level Among Children Aged 06-36 Month in Kathmandu Valley, Nepal

2015 Meghnath Dhimal 2016 *Transactions American Society of Mechanical Engineers* 1928 *Cardiovascular Health in Children and Adolescents: Present and future* Shikai Yu 2025-01-13 Cardiovascular disease is the most common chronic non-infectious disease and ranked as the number one cause of death in the world. Although usually manifested at

older ages, cardiovascular disease may originate from younger ages. Massive studies have shown that cardiovascular risk factors tracked from childhood/adolescence to adulthood. Keeping an ideal cardiovascular health in childhood and adolescence is thus highly important for preventing the development of cardiovascular disease. As cardiovascular disease is often perceived as a problem for the older population, cardiovascular health in children and adolescents is usually neglected, resulting them a long-lasting exposure to unhealthy behaviors and factors of cardiovascular risk, as well as lower detection and poor management of cardiovascular disease in children and adolescents. The incidence and prevalence of cardiovascular disease and its risk factors in young people have been increasing over the past few decades, as reported by many studies. Recent data based on the National Health and Nutrition Examination Surveys 2005-2010 emphasized

the worrying situation of the cardiovascular health in US adolescents. More data are needed to reveal the current situation of cardiovascular health and the related organ damage in children and adolescents, especially in low- and middle-income countries. Also, investigations are warranted to predict future trends and to develop potential intervention strategies aiming at the improvement of cardiovascular health in children and adolescents.

Food-Based Dietary Guidelines

Norman Temple 2025-11-26

Food-based dietary guidelines (FBDGs) are essential public health tools designed to guide populations towards healthier eating habits. Developed and disseminated by national government agencies, FBDGs can be presented in text or diagrammatic formats, such as food guides. These guidelines aim to be easily understood by the general population to enhance food literacy. The field of nutrition is continually

evolving, with new concepts and issues emerging, such as the effectiveness of communication tools, the health impacts of highly processed foods, and the environmental consequences of different food categories. Recent studies have shown significant changes in the design of food guides, with many countries adopting a plate design. However, there are ongoing debates about the best design format, the role of ultra-processed foods (UPF), and the integration of environmental sustainability into FBDGs. This research topic aims to explore the various aspects of designing and implementing effective FBDGs. The primary objectives include examining recent developments in food guide designs, understanding how to incorporate UPF into dietary advice, and evaluating the role of traditional dietary patterns and social food behaviors. Additionally, the research seeks to address the growing need to include environmentally-friendly advice

in FBDGs to promote sustainable diets. By answering these questions, the research aims to provide a comprehensive understanding of how FBDGs can be optimized to improve public health and environmental outcomes. To gather further insights into the complexities and challenges of FBDGs, we welcome articles addressing, but not limited to, the following themes:

- Recent developments in the design of food guides, including the debate between plate and pyramid designs
- The incorporation of UPF into FBDGs and the potential health implications
- Differences in food categorization across various food guides and their implications
- The integration of traditional dietary patterns and social food behaviors into FBDGs
- The inclusion of environmentally-friendly advice to promote sustainable diets
- Strategies for using FBDGs to increase food literacy among the general population and specific groups such as children and the elderly
- Policy and economic issues

related to the development and implementation of FBDGs
