Concept Development in the Secondary School Peter Langford 2016-03-10 Originally published in 1987, this book introduces the reader to work on the intellectual development of adolescents relevant to the secondary school teacher. It covers the teaching of English, history, geography, economics, politics, legal studies, physics, chemistry, biology and mathematics. Although it emphasises the continuing importance of Piaget's thought, the book aims to introduce readers to the non-Piagetian research that had taken place in recent years.

Theoretical Nursing Afaf Ibrahim Meleis 2011 "An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing

about theory development was about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"--Provided by publisher.
