connections between content, skills, and assessment measures, these maps help ensure that all aspects of a lesson are aligned not only with each other, but also with mandated standards and tests. In *Getting Results with Curriculum Mapping*, Heidi Hayes Jacobs and her coauthors offer a wide range of perspectives on how to get the most out of the curriculum mapping process in districts and schools. In addition to detailed examples of maps from schools across the United States, the authors offer concrete advice on such critical issues as \* Preparing educators to implement mapping procedures, \* Using software to create unique mapping databases, \* Integrating decision-making structures and staff development initiatives through mapping, \* Helping school communities adjust to new curriculum review processes, and \* Making mapping an integral part of literacy training. Teachers, administrators, staff developers, and policymakers

alike will find this book an essential guide to curriculum mapping and a vital resource for spearheading school improvement efforts. Note: This product listing is for the Adobe Acrobat (PDF) version of the book.

*Tests and Examinations* Lewis R. Aiken 1998-04-17 This book is a relatively brief but fairly comprehensive treatment of psychological and educational assessment in the cognitive domain. It is designed primarily for researchers and practitioners in the behavioral sciences who use objective tests, essay tests, and performance tests in applied and theory based research on employee and student selection, placement, promotion, certification or

licensing, and / or for evaluating the effects of instruction, training, and intervention programs on behavior and cognition.

the digital territorial and socio-economic digital modelling and representation methods. The virtual spaces, created by GIS, photoshopping, games, etc., have become an area of interest for many as they produce spatial imaginaries having social, political and individual consequences. It delves into the literature on digital capitalism and how it is giving birth to a new mode of expansionary capitalism to reap the surplus values and profits from peripheries and drain the same to the core. It shows how digitalisation has enabled enterprises to operate from a virtual space with strong spatial networks. Mega digital enterprises together control a trillion-dollar economy having massive consequences for digital labour, welfare of consumers, and development geographies. This book explores some critical questions while generating summaries of existing literature: How do imaginaries, models or virtual realities help us comprehend spatialities? How does

capitalism relate to digitalism, and with what consequences? How do the cities and mobilities relate to digitalisation? What are the possibilities of re-configuring the man-environmental relations with digital technologies in view of rising pollution and impending climate change? Teachers, researchers, and students engaged in this new area of digital geography, especially in social science and its subfields of sociology, economics, political sciences, anthropology, psychology, development studies, policy studies, social work, urban studies, and planning, will find the volume very useful. For a full picture, the book can be read in combination with its companion volume on 'Digital Geographies - Theory, Space and Communities'.
