The Scaffold User Course Learning Guide John Palmer
1996-10

A Guide to Scaffold Use in the Construction Industry
2001 On August 30, 1996, OSHA issued revised standards for scaffolds. The revised standard, known as "Safety Standards for Scaffolds Used in the Construction Industry" is found in Title 29 Code of Federal Regulations (CFR) Part, Subpart L. The final rule updates the existing construction scaffold standards in Subpart L. The revised standards set performance-based criteria to protect employees from scaffold-related hazards such as falls, falling objects, structural instability, electrocution, or overloading. This final rule addresses training and various types of scaffolds, as well as falling object protection, ladders, weather conditions, aerial lifts, stilts, and other

matters that were not previously covered by the OSHA scaffold standards. In addition, it allows employers more flexibility when using protective systems for workers on scaffolding. The language of the rule has been simplified by eliminating duplicative and outdated provisions, consolidating overlapping requirements, and enhancing performance-based criteria to allow employers more flexibility in compliance while still protecting employees.

Administration (OSHA) with protecting all working men and women across the United States. To do so, the agency sets federal standards for general industry, construction, and shipyard employment. OSHA also promotes a variety of voluntary programs that strive to form partnerships with businesses, labor, and other groups to help employers provide safer and more healthful workplaces for employees. Some of the agency's voluntary initiatives include safety and health management programs, the Voluntary Protection Programs, consultation assistance, and training and education programs and grants. For more information on these outreach efforts, see page 12 of this booklet. The agency's recent rule, Safety Standards for Scaffolds Use in the Construction Industry rule aims to protect workers using scaffolding in construction work. Scaffolding hazards continue to rank high on the list of the most frequently cited standards in the construction

industry. Scaffold-related fatalities account for a significant number of fatalities in the construction workplace. This booklet addresses some of the most common questions about OSHA's scaffold standard. It is all part of the agency's effort to provide guidance to employers who need help in complying with OSHA's standards to protect the working men and women across the nation. This booklet is organized in a question and answer format to highlight pertinent information that employers and employees need to know. The subjects addressed in each question follow the basic organization of the standard. In addition, each answer references the regulatory text where that particular information can be located. These references appear at the end of each answer in boldface type. An appendix also includes an alphabetical index to the standard for quick reference. It is important to note that the question and answer section of this booklet simply provides an

overview of the standard. For compliance with all of the regulation's requirements, refer to the regulatory text or Title 29 of the Code Federal Regulations (CFR) Part 1926, Subpart L.
