How Cells Function Catherine Coots 2015-01-01 Readers learn that a living organism is a system, or structure, that reproduces, changes with its environment over a period of time, and maintains its individuality by continuous metabolism. To maintain life, an organism repairs or replaces (or both) its structures by a constant supply of the materials of which it is formed. It keeps its life processes in operation by a steady supply of energy. A major contributing part of an organism's survival is the functioning of its cells. This volume provides essential information on cell functions, including amino acids, fibrous and globular proteins, DNA, protein synthesis, and metabolism.

Cells Gr. 5-8 Angela Wagner 2007-09-01 Become a cell expert. Our resource demonstrates why cells are the building blocks of life. Start your breakdown by first identifying what a cell is. Then, compare single-celled and multicellular organisms. Introduce the concept of DNA before exploring the different parts of a cell. From there, take a look at the jobs of these parts. Move on to cell reproduction by exploring mitosis and meiosis. Dissect plant and animal cells to see how they work and how they are similar. Look at the big picture by seeing how cells become organisms. Finally, learn how particles move through cell membranes with diffusion and osmosis. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

The Basics of Cell Biology Anne Wanjie 2013-07-15 This text provides readers with a comprehensive study of the mechanics of cell biology that aligns with Core Curriculum requirements in science. Topics covered range from the different types of cells-- plant and animal, eukaryote and prokaryote, and stem cells--to the components of the cell such as the cell wall, DNA, and plasma to cell locomotion and the cell cycle including cell division, mitosis, and meiosis. Finally, the topic of cancer, when cells divide uncontrollably, is addressed. In conclusion, the title offers a biography section of the pioneers of DNA research, Francis Crick, Rosalind Franklin, and James Watson, whose research led us to understand the structure of DNA. This dynamic volume explains the structure, evolution, and intricacies of this versatile unit of life. Students will learn about the difference between prokaryotes and eukaryotes, the organelles that support a cell's functions, and the history of cell research from its discovery to current debates about the use of stem cells.

Mighty Animal Cells Rebecca L. Johnson 2008 Through close-up photographs of cells and cell parts, this book explains what special talents your cells--and the cells of other animals--have. *How Plant and Animal Cells Differ* Anna Kaspar and Judy Yablonski 2015-01-01 It's usually pretty easy to tell if an organism is an animal or a plant at a single glance. Interestingly enough, plant and animal cells are also easy to tell apart. Readers will learn the organelles—cell parts—that are particular to animal or plant cells. They will be exposed to the wide variety of plant and animal cells, as well as the characteristics that makes specialized cells so perfectly suited to their functions. Special attention is paid to photosynthesis and cellular respiration, including the complementary nature of the two processes.

The Death Trust David Rollins 2007-09-25 As shocking as today's headlines, this internationally bestselling thriller plunges readers into the revelation of a terrifying conspiracy that begins with a sniper's bullet on a routine patrol in Iraq...and leads all the way back to the White House—where the ultimate betrayal of trust is being played out.... Amid the dust, death, and chaos of Iraq, an American soldier on a routine patrol is killed by an unseen

enemy. It's a tragedy but not a crime—until it's linked to the bizarre death of a decorated four-star general who happens to be the dead man's father...and the son-in-law of history's most feared and powerful U.S. vice president. Major Vin Cooper of Air Force Special Investigations is the kind of loose cannon no commanding officer can completely control...or survive without. Cooper's a man whose capacity to absorb grief is matched only by his ability to dish it out. And this case—which will be either his most important or his last—has plenty of both. Scarred by battle and a recent divorce, Cooper answers to no one but his own tough-as-nails female general. She knows there's no one as relentless, as insubordinate, and as effective in prying out the truth as Cooper—no matter where it leads or who it angers. Reluctantly paired with Special Agent Anna Masters, Cooper begins his search at the scene of a suspicious crash at Ramstein Air Base in Germany. There they uncover a trail of inexplicable “accidental” deaths that leads from the war-torn streets of Baghdad to sex slavery in Latvia and a marriage that began in the White House Rose Garden and disintegrated into bitterness and infidelity. And with every step they take, Cooper and Masters come closer to the shocking truth about the biggest and most murderous lie of all.

Cell Biology Melissa Stewart 2007-04-03 Tells the story of how biologists unlocked the secrets of cells and revolutionized the way we look at living things.

How Cell Processes Are Regulated Clementine Tucker 2015-01-01 A cell is the smallest unit of living matter that can exist by itself. Some organisms, such as bacteria, are made up of only one single cell. As for other organisms, such as humans and redwood trees, billions of cells are required. That means that those multitudinous cells have to work together to enable people to do things such as walk, talk, and eat, and for trees to send down roots, sprout branches, and grow leaves. Readers of this authoritative book will discover how such cells function, get energy, grow, reproduce, specialize, and communicate. *The World of the Cell* Robert Snedden 2007-08-27 Looks at cells as life's building blocks, showing how cells are put together, examining the differences between prokaryotes and eukaryotes, speculating about the first

forms of life, and discussing the newly-classified kingdom archaea.

New Scientist 2006
