Getting to the Common Core Sharon L. Spencer 2015-01-20 This book demonstrates how teachers use research-based strategies to meet Common Core Standards while focusing on students. It includes examples from various grade levels, showing strategy implementation, student work samples, and reflections. The book emphasizes practical approaches and the flexibility of strategies across subjects.

Reconstructing School Mathematics Stephen I. Brown 2001 This book offers a critique of two major themes of the modern reform movement in mathematics education: problem solving and the applications of mathematics to the «real world». In examining the educational fallacy inherent in the impulse to move unflinchingly from «problem» to «problem solving», Stephen I. Brown demonstrates the potential of mathematical reflection to reveal aspects of self and society that have been suppressed in curriculum. He then argues that in seeking connections between mathematics and the «real world», we have tended to reduce their relationship to one of modeling. Furthermore, in constructing what is «real» in an overly concrete way, we have lost sight of the wonder of what is «real» in both mathematics and the world. Brown explores alternative text formats, including that of the novel and the Talmud, as vehicles to rejuvenate the educational potential of problems and of real world connections.

A Guide to Detracking Math Courses Angela Torres 2023-05-03 Create a pathway to equity by detracking mathematics The tracked mathematics system has been operating in US schools for decades. However, research demonstrates negative effects on subgroups of students by keeping them in a single math track, thereby denying them access to rigorous coursework needed for college and career readiness. The journey to change this involves confronting some long-standing beliefs and structures in education. When supported with the right structures, instructional shifts, coalition building, and educator training and

support, the detracking of mathematics courses can be a primary pathway to equity. The ultimate goal is to increase more students' access to and achievement in higher levels of mathematics learning—especially for students who are historically marginalized. Based on the stories and lessons learned from the San Francisco Unified School District educators who have talked the talk and walked the walk, this book provides a model for all those involved in taking on detracking efforts from policymakers and school administrators, to math coaches and teachers. By sharing stories of real-world examples, lessons learned, and prompts to provoke discussion about your own context, the book walks you through: Designing and gaining support for a policy of detracked math courses Implementing the policy through practical shifts in scheduling, curriculum, professional development, and coaching Supporting and improving the policy through continuous research, monitoring, and maintenance. This book offers the big ideas that help you in your own unique journey to advance equity in your school or district's mathematics education and also provides practical information to help students in a detracked system thrive.
