**Corpora** Barbara

Lewandowska-Tomaszczyk

2000 The papers in this volume are centred on the general field of corpus linguistics and the varying types of language corpora within it. The papers show that corpus linguistics and the related subject of computational linguistics is a vibrant research area with a wide range of approaches.

They address a number of key issues in the research areas of learner corpora, parallel corpora, translation, semantic and lexicography, corpus analysis and expert systems.

Finally, a number of contributors come from different language backgrounds and this is reflected in their papers.

**Global Innovation, Finance, and International**

**Commerce** F. John Mathis

2022-12-12 This book analyses the historical context and progression of "significant innovations" beginning with

the industrial revolution, starting around 1750 to the present. It explores the interrelationship, causes, and evolutionary process of contemporary "disruptive" inventions and the role played by global finance and international commerce to support these. First, the authors examine the environment and circumstances surrounding the inventors and explore their backgrounds to determine, why at a specific time, they identified a need that became the seed for invention and, what was their method of successfully commercializing their innovation. Secondly, they focus on the financing of the inventor, the innovation, and the commercialization of the invention(s). They analyze the changes in finance during the shift from a labor-based production process to a more capital-intensive production process, and what new financial products or financial markets were created to facilitate this transition. Third, they explore the impact of

global commerce on the inventor country's innovation environment and international competition impacting the innovation's production, distribution, and sales, as well as, investigating any financial impact from the demand side and whether that impact was domestic or global in character. Furthermore, they consider if and how global finance and international commerce including the migration of people, together play a role in helping the disruptive invention satisfy a need in society, whether from a production or consumption perspective. Finally, they search for common elements that repeatedly inspired inventors and their disruptive innovations over time. This book will appeal to global government officials, business leadership, early career professionals, and students across a number of disciplines including finance, economics, business, engineering, and technology.

Opportunities from the Integration of Simulation Science and Data Science National Academies of Sciences, Engineering, and Medicine 2018-07-31

Convergence has been a key topic of discussion about the future of cyberinfrastructure for science and engineering research. Convergence refers both to the combined use of simulation and data-centric techniques in science and engineering research and the possibilities for a single type of cyberinfrastructure to support

both techniques. The National Academies of Science, Engineering, and Medicine convened a Workshop on Converging Simulation and Data-Driven Science on May 10, 2018, in Washington, D.C. The workshop featured speakers from universities, national laboratories, technology companies, and federal agencies who addressed the potential benefits and limitations of convergence as they relate to scientific needs, technological capabilities, funding structures, and system design requirements. This publication summarizes the presentations and discussions from the workshop.

**The Power of Mandate: How Visionary Leaders Keep Their Organization Focused on What Matters Most**

Scott Stawski 2019-06-28 The book that reveals how today's most successful leaders turn vision into reality—featuring profiles of Jeff Bezos, Bill Gates, Mark Zuckerberg, Steve Jobs, Reed Hastings, Mike Lawrie, and more. Consensus. Negotiation.

Compromise. A democratic approach to leadership drives most organizations today. Consensus based decision making may be popular, but it is far from the best approach in business. It's also rarely the right approach for C-level executives—especially now that digital technology is driving real business disruption. Simply put, consensus is an innovation killer. The most successful, disruptive companies are propelled forward by mandate driven leaders. These leaders are inspired by a compelling belief, idea, strategy or tactic. Through their willpower, organizations are thrust into the future. The mandate driven leadership model is the hallmark of visionaries who have changed entire industries and sustained consistent innovation in their own companies. The Power of Mandate reveals what it takes to be an effective leader in today's disruptive business environment. You'll learn how the most audacious visionaries managed turn their visions into

Profit — getting more out of something than you put into it — is the original genius of homo sapiens, who learned how to unleash the energy stored in wood, exploit the land, and refashion ecosystems. As civilization developed, we found more and more ways of extracting surplus value from the earth, often deploying brutally effective methods to discipline people to do the work needed. Historian Mark Stoll explains how capitalism supercharged this process and traces its many environmental consequences. The financial innovations of medieval Italy created trade networks that, with the European discovery of the Americas, made possible vast profits and sweeping cultural changes, to the detriment of millions of slaves and indigenous Americans; the industrial age united the world in trade and led to an energy revolution that changed lives everywhere. But when efficient production left society awash in goods, a new sort of capitalism, predicated on

endless individual consumption, took its place. This story of incredible ingenuity and villainy begins in the Doge's palace in medieval Venice and ends with Jeff Bezos aboard his own spacecraft. Mark Stoll's revolutionary account places environmental factors at the heart of capitalism's progress and reveals the long shadow of its terrible consequences.

### **Invent and Wander**

2020-11-17 In Jeff Bezos's own words, the core principles and philosophy that have guided him in creating, building, and leading Amazon and Blue Origin. Michael Keller  
2009-01-12 Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 186. Amazonia and Global Change synthesizes results of the Large-Scale Biosphere-Atmosphere Experiment in Amazonia (LBA) for scientists and students of Earth system science and global environmental change. LBA, led by Brazil, asks how Amazonia currently functions in the global climate and biogeochemical systems and how the functioning of Amazonia will respond to the combined pressures of climate and land use change, such as Wet season and dry season aerosol concentrations and their effects on diffuse radiation and photosynthesis Increasing greenhouse gas concentration, deforestation, widespread biomass burning and changes in the Amazonian water cycle Drought effects and simulated drought through rainfall exclusion experiments The net flux of carbon between
