Teachers Who Teach Teachers Tom Russell

2013-09-13 This is a reflection on the education of teachers, written by teacher educators who discuss features of their work and the challenges facing teacher education in the 1990s. The book invites the reader to attempt similar analyses of personal practice and development in their own teaching.; The book deals with the personal development of both new and experienced teacher educators, illustrating how strongly teacher educators are influenced by their visions and by the challenge to prove themselves in the university setting. In addition, the book examines the ways in which teacher educators have acted to promote their own professional development and study their own practices, including writing as a tool for reflection, a life-history approach to self-study, as well as a study of educative relationships with others, and the analysis of a personal return to the classroom. Finally, it takes a broader look at the professional development of teacher educators and offers a challenge to all teacher educators to consider the tension between rigour and relevance.

Science Of Learning Physics, The: Cognitive Strategies For Improving Instruction Jose Mestre 2020-11-24 This book on the teaching and learning of physics is intended for college-level instructors, but high school instructors might also find it very useful. Some ideas found in this book might be a small 'tweak' to existing

practices whereas others require more substantial revisions to instruction. The discussions of student learning herein are based on research evidence accumulated over decades from various fields, including cognitive psychology, educational psychology, the learning sciences, and discipline-based education research including physics education research. Likewise, the teaching suggestions are also based on research findings. As for any other scientific endeavor, physics education research is an empirical field where experiments are performed, data are analyzed and conclusions drawn. Evidence from such research is then used to inform physics teaching and learning. While the focus here is on introductory physics taken by most students when they are enrolled, however, the ideas can also be used to improve teaching and learning in both upper-division undergraduate physics courses, as well as graduate-level courses. Whether you are new to teaching physics or a seasoned veteran, various ideas and strategies presented in the book will be suitable for active consideration.

Rethinking Cancer Bernhard Strauss 2025-09-09 Leading scientists argue for a new paradigm for cancer research, proposing a complex systems view of cancer supported by empirical evidence. Current consensus in cancer research explains cancer as a disease caused by specific mutations in certain genes. Thanks to dramatic advances in genome sequencing, never before have we known so much about the individual cancer cell—and yet it is still unclear how to use this knowledge for treatment success. In this volume, leading researchers argue for a new theory framework for understanding and treating cancer. The contributors propose a complex systems view of cancer, presenting conceptual building blocks for a new research paradigm supported by empirical evidence. The contributors first discuss the new research framework in terms of theoretical foundations and then take up the relevance of a systems approach, reviewing such topics as nonlinearity, recurrence after treatment, the cellular attractor concept, network theory, and noncoding

DNA—the “dark matter” of our genome. They address the temporality of cancer progression, drawing on evolutionary theory and clinical experience. Finally, they cover the dominant role of the tissue microenvironment in cancer, analyzing topics including altered metabolic pathways, the disease-defining influence on metastasis, and the interconnectedness of different environmental niches across levels of organization.

Iterative Design of Teaching-Learning

Sequences Dimitris Psillos 2015-11-24 This book addresses a very important aspect of science education and science education research respectively: The research-based development of Teaching Learning Sequences. The authors elaborate on important theoretical issues as well as aspects of the design and iterative evolution of a several Teaching Learning Sequences in a modern scientific and technological field which is socially relevant and educationally significant. The book is divided into two parts. The first part includes a collection of papers discussing the theoretical foundations and characteristics of selected theoretical frameworks related to designing Teaching Learning Sequences, elaborate on common issues and draw on the wider perspective of design research in education. The second part contains a collection of papers presenting case studies concerning the design, implementation, iterative evolution and evaluation of Teaching and Learning Sequences in a variety of educational context. The case studies deal with a more or less new subject matter, a part of modern interdisciplinary science, material science, which enhances the connections between science and technology. From a wider perspective the case studies draw on existing theoretical ideas on inquiry in various contexts and provide powerful suggestions for contextualized innovation in a variety of school systems and existing practices. *British Education Index* 2005

Proceedings of the International Conference on Mathematics and Science Education

(ICoMSE 2023) Habiddin Habiddin 2024-07-31 This is an open access book. We are happy to welcome you to the 7th International Conference on Mathematics and Science Education

(ICoMSE) 2023 at the Department of Science Education, Universitas Negeri Malang, Malang, East Java, Indonesia, August 14–15th, 2023. It is a privilege to play host to the world’s foremost experts in the fields of chemistry, biology, physics, mathematics, and science education at this important conference on Science and Mathematics education. Our knowledge of how and why students learn science (chemistry, biology, physics) and mathematics and what can be done to improve science and mathematics education is expanded by studies of these subjects’ pedagogy. We in the field of chemistry, biology, physics and mathematics education research are interested in what influences, aid or hinder students’ ability to learn the subject. We investigate various classroom settings, emerging methods for incorporating technology into chemistry, biology, physics and mathematics education, and the interplay between chemistry, biology, physics and mathematics, society, and other scientific fields. We are always working to improve our methods of preparing chemistry, biology, physics and mathematics teachers and providing ongoing support for their professional growth as we search for factors that increase student interest in the subject. We also consider the potential impact of recent developments in pedagogy and technology in the field of chemistry, biology, physics and mathematics education on ongoing investigations. We, therefore, chose the theme of the conference: “Science and Mathematics Education Research for Sustainable Development” The global situation following the ongoing post-COVID-19 pandemic and the difficulties faced by chemistry, biology, physics and mathematics education inspired this theme. In the midst of a global post-pandemic, this highlights the urgency of investing in quality education. The 4th goal of the United Nations’ Sustainable Development Agenda is: “Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all” (SDG-4) The field of chemistry, biology, physics and mathematics education has not been immune to these changes, but recent studies have yielded useful strategies for adapting to them. Researchers in chemistry, biology, physics, and mathematics education are encouraged to review the topics covered at the ICOMSE 2023 conference, submit

abstracts, and attend the event. We hope to see you in Malang, East Java, Indonesia. Enjoy the conference!

Cognition, Teaching, and Assessment Michael Pressley 1995 This text provides educators with knowledge essential for informed decision making. It examines the subject matter from strategic, knowledge-based, metacognitive, motivational, and biological perspectives and surveys current thinking pertaining to math, science, writing, and reading.
