The Learning Wheel Annabelle Nelson 1994 This book describes a conceptual

framework for multicultural education that is based on how various cultures lead their members to know about the world. This approach accounts for diverse ways of knowing and learning and is based on the symbol of the wheel as an ancient organizational model from Asia, Europe, Africa, and North America. This model involves multiple intelligences as ways of knowing that are supported by different cultures. The wheel intelligence model represents five intelligences, one in each of the four cardinal directions and one in the middle. The wheel intelligence model forms the basis of the learning wheel, which is a concrete tool to construct lesson plans, curriculum, and educational environments. The learning wheel helps teachers include each intelligence and integrate methods that are best suited to those intelligences in every lesson. Chapter 1 catalogues

wheels used by cultures around the world, the purposes of wheels, and the commonalities of these wheels. Chapter 2 describes the wheel as an organizational tool to create a multiple intelligence model based on a multicultural perspective. This chapter also defines the five different intelligences: practical, technical, conceptual, creative, and expanded. Chapter 3 further refines the circular model through the learning wheel, a lesson-planning tool for teachers to ensure that each of the diverse intelligences, or ways of knowing, are addressed in instruction. Chapter 4 discusses intuition and its relationship to the unconscious mind and provides sample imagery exercises and tips on developing intuition. Chapter 5 overviews issues involved in cross-cultural work including specific techniques. Chapter 6 includes lesson plans representing various disciplines and age groups based on the learning wheel. Appendices include the

learning wheel lesson planning form, an imagery script form, information on ethnicity and learning style, and strategies for learning about culture. Contains 51 references and an index. (LP)

A Practical Guide to Teaching Research Methods in Education Aimee LaPointe Terosky 2023-03-23 A Practical Guide to Teaching Research

Methods in Education brings together more than 60 faculty experts. The contributors share detailed lesson plans about selected research concepts or skills in education and related disciplines, as well as discussions of the intellectual preparation needed to effectively teach the lesson. Grounded in the wisdom of practice from exemplary and award-winning faculty from diverse institution types, career stages, and demographic backgrounds, this book draws on both the practical and cognitive elements of teaching educational (and related) research to students in higher education today. The book is divided into eight sections, covering the following key elements within education (and related) research: problems and research questions, literature reviews and theoretical frameworks, research design, quantitative methods, qualitative methods, mixed methods, findings and discussions, and special topics, such as student identity

development, community and policy engaged research, and research dissemination. Within each section, individual chapters specifically focus on skills and perspectives needed to navigate the complexities of educational research. The concluding chapter reflects on how teachers of research also need to be learners of research, as faculty continuously strive for mastery, identity, and creativity in how they guide our next generation of knowledge producers through the research process. Undergraduate and graduate professors of education (and related) research courses, dissertation chairs/committee members, faculty development staff members, and graduate students would all benefit from the lessons and expert commentary contained in this book.

The Art and Science of Lesson Design John R. Walkup
 2020-01-11 The Cognitive Rigor Matrix superposes two of the most common tools used in K-12 education: Bloom's Revised Taxonomy and Depth

of Knowledge. This matrix has been adopted by numerous state departments of education and national organizations to evaluate the rigor of educational materials. The matrix also offers a powerful ability to help teachers plan and carry out standards-based lessons that best support student learning. This book, aimed at secondary school teachers of all subjects, provides a systematic means of leveraging the Rigor Cube to develop rigorous, standards-based lesson plans. The approach employed in this book includes the development of culminating activities for students to demonstrate their learning, identification of standards-based lesson content, selection of potentially effective instructional methods, and student questioning strategies. Special methods for supporting students who are deficient in their background knowledge without undermining the rigor of lessons are also included. Sample lessons are included that illustrate every step of the

lesson planning process from start to finish. These sample lesson plans address state content standards related to the Common Core State Standards (both math and English language arts), Next Generation Science Standards, career-technical education standards, and art.
