Experiential Therapies for Eating Disorders Lynne M. Hornyak 1989-03-24 It should not surprise us that so many are finding unique value in the experiential techniques. The fact that eating-disordered patients adopt physical and often complex metaphoric means of expressing their emotional pain suggests the difficulty we are likely to encounter in asking them to articulate the inarticulable. In moving to spatial, kinesthetic, and symbolic expression, we are, in a sense, agreeing to speak the patient's language rather than our own. Given the very nature of eating disorders, many clinicians are finding that experiential methods are particularly applicable for treating patients who suffer from them. Providing a valuable new tool for practitioners, EXPERIENTIAL THERAPIES FOR EATING DISORDERS is the first text to focus solely on the application of expressive therapies and experiential techniques to the

treatment of anorexia nervosa and bulimia. Each chapter of this innovative work systematically reviews a single experiential treatment approach. Among these are * guided imagery * hypnosis * structured eating * family sculpting * psychodrama and gestalt therapy * dance/movement therapy * art therapy * music therapy * and metaphor/poetry therapy.

Throughout, important clinical issues that often accompany eating disorders also are addressed, including such topics as self-awareness, self-esteem, autonomy, identity, impulse regulation, affect modulation, body image, and interpersonal relationships.

Countertransference issues are examined, and areas needing further exploration such as father's role in the development of eating disorders, the hypnotizability of eating disordered patients, and the role of family in the treatment process are delineated. The contributing authors, experienced practitioners from a variety of disciplines, systematically establish the theoretical framework of each treatment approach, fully describe specific techniques, and then consider their practical applications in both inpatient and outpatient settings--providing numerous case examples for illustration. They also offer helpful recommendations for incorporating these techniques into ongoing treatment plans.

EXPERIENTIAL THERAPIES FOR EATING DISORDERS--a valuable clinical resource for psychologists, psychiatrists, and all mental health professionals called on to treat patients suffering from anorexia and bulimia nervosa. This innovative work illustrates the use of guided imagery, hypnosis, structured eating, family sculpting, psychodrama and gestalt therapy, and dance/movement, art, music, and metaphor/poetry therapy in the treatment of anorexia and bulimia nervosa. Systematically presented are the theoretical framework of each treatment approach, specific techniques, and their practical applications illustrated by numerous case examples. All professionals who treat clients with eating disorders will find this volume a most valuable clinical resource.

Eating Disorders and Weight Control Susan Frissell 1998 This essential volume characterizes what the different eating disorders are, and offers safe ways to maintain weight control

through diet, nutrition, and exercise. The authors discuss body image and social pressures which may cause eating disorders.

Groups Across Settings includes examples of psycho-educational, counseling, and psychotherapy groups in a variety of settings. This section presents readers with theoretical and empirical support for group work in such settings as the Veterans Administration system, university counselling centers, and more. Groups Across the Lifespan consist of chapters across many age groups. For children and adolescents, cognitive and developmental issues are addressed. For adults, socialization and interpersonal issues are addressed, including separate chapters for male and female groups. Finally, a chapter on the elderly deals with cognitive, health, and life review issues. Special Topics Groups presents a continuum of different types of groups used to treat people with interpersonal and developmental issues, such as grief, substance abuse, depression, and others. Each chapter in this section provides definitions and descriptions of the issues along with theoretical and empirical support.
