*Design of Modern Highway  
Bridges* Narendra Taly 1998

This text provides an introduction to the theory and practice of designing modern highway bridge superstructures. Beginning with the history of bridges, it describes various types of bridge superstructures, materials of construction, bridge loadings, and analysis techniques for various types.

impact factors, a new load distribution method for analysis, and a probabilistically based limit state design approach. Traditional deflection limits have been made optional in the LRFD format. The extensive changes in the specification make it unclear as to whether bridges designed using the LRFD specification will be more or less flexible than those designed using the ASD specification. A series of bridges were designed using both ASD and LRFD formats to investigate what, if any, significant changes in bridge flexibility might be encountered and whether deflection limits are more or less likely to be violated with the LRFD format. Based upon the design of six single-span bridges with varying spans and numbers of girders, and a partial design of a three-span continuous bridge, it was concluded that the LRFD designs tend to be lighter and more economical in general and also tend to be more flexible than ASD designs of

the same bridge. The weight savings appears to be more pronounced on single-span bridges than on multiple-span bridges because of the greater significance of local and lateral stability concerns in the finished bridges for multi-span bridges.

 Goble 1999 This synthesis  
 report will be of interest to  
 geotechnical, structural, and  
 bridge engineers, especially  
 those involved in the  
 development and

implementation of the  
 geotechnical aspects of the  
 AASHTO Bridge Code. The  
 synthesis documents a review  
 of geotechnical related LRFD  
 specifications and their  
 development worldwide to  
 compare them with the current  
 AASHTO LRFD Bridge Code.  
 Design procedures for  
 foundations, earth retaining  
 structures, and culverts are  
 summarized and compared  
 with the methods specified by  
 the AASHTO code. This TRB  
 report provides information  
 designed to assist engineers in  
 implementing the geotechnical  
 features of LRFD methods.  
 Information for the synthesis  
 was collected by surveying U.S.  
 and Canadian transportation  
 agencies and by conducting a  
 literature search using  
 domestic and international  
 sources. Interviews were also  
 conducted with selected  
 international experts. The  
 limited available experience in

 information from international  
 practice are discussed to

 have arisen in order that

 2014 "The NCHRP Report 776 provides proposed revisions to Section 1.3--Design Philosophy of the AASHTO LRFD Bridge Design Specifications with detailed examples of the application of the proposed revisions. The proposed revisions include system factors that can be used during the design and safety assessment of bridges subjected to distributed lateral load being evaluated using the displacement-based approach specified in the AASHTO Guide Specifications for LRFD Seismic Bridge Design or the traditional force-based approach. Also, the report presents system factors calibrated for application with bridge systems subjected to vertical vehicular loads. The material in this report will be of immediate interest to highway design engineers."--
