Organic Chemistry, International Adaptation T.  
W. Graham Solomons 2023-01-19 Organic  
Chemistry, 13th edition provides a  
comprehensive, yet accessible, treatment of all  
the essential organic chemistry concepts, with  
emphasis on relationship between structure and  
reactivity in the subject. The textbook includes  
all the concepts covered in a typical organic  
chemistry textbook but is unique in its skill-  
development approach to the subject. Numerous  
hands-on activities and real-world examples are  
integrated throughout the text to help students  
understand both the "why" and the "how" behind

organic chemistry. This International Adaptation  
offers new and updated content with improved  
presentation of all course material. It offers new  
material on several topics, including the  
relevance of intermolecular forces in the  
immune response and vaccines like those for  
Covid-19, the chemistry of breathing (carbonic  
anhydrase), how conjugation and complexation  
affect the color of lobsters, and how  
biodegradable polymers are used to stabilize  
vaccines and pharmaceuticals. Content is  
revised to reflect the current understanding of  
chemical processes, and improved depictions of  
longstanding mechanisms. This edition builds on  
the ongoing pedagogical strength of the book  
with the inclusion of additional worked and end-  
of-chapter problems and an engaging set of new  
problems entitled "Chemical Consultant  
Needed". These draw from the primary chemical  
literature and give students experience of  
working with more complex, polyfunctional  
structures, and areas where key transformations

take place.
