Physical Security and Environmental Protection John Perdikaris 2014-04-22 Manage a Hazard or Threat Effectively and Prevent It from Becoming a Disaster When disaster strikes, it can present challenges to those caught off guard, leaving them to cope with the fallout. Adopting a risk management approach to addressing threats, vulnerability, and risk assessments is critical to those on the frontline. Developed with first responders at the municipal, state, provincial, and federal level in mind, Physical Security and Environmental Protection guides readers through the various

phases of disaster management, including prevention, mitigation, preparedness, response, and recovery. It contains the steps and principles essential to effectively managing a hazard or threat, preventing it from becoming a disaster. From the Initial Threat Assessment to Response and Recovery Operations Considering both natural and manmade disasters, this text includes sections on hazard analysis, emergency planning, effective communication, and leadership. It covers threat assessment, examines critical infrastructure protection, and addresses violent behavior. The text also outlines protection strategies; discussing strategy management, identifying suspicious behavior, and detailing how to avoid a potential attack. The text includes an overview on developing force protection plans, security plans, and business continuity plans. The book also addresses response and recovery operations, explores post-incident stress management, and poses the following questions:

What hazards exist in or near the community? How frequently do these hazards occur? How much damage can they cause? Which hazards pose the greatest threat? This text includes the tools and information necessary to help readers develop business continuity, force protection, and emergency preparedness plans for their own group or organization.

Designing to Heal Jenny Donovan 2013-04-22
Designing to Heal explores what happens to communities that have suffered disasters, either natural or man-made, and what planners and urban designers can do to give the affected communities the best possible chance of recovery. It examines the relationship that people have with their surroundings and the profound disruption to people's lives that can occur when that relationship is violently changed; when the familiar settings for their lives are destroyed and family, friends and

neighbours are displaced, incapacitated or killed. The book offers a model of the healing process, outlining the emotional journey that people go on as they struggle to rebuild their lives. It outlines the characteristics of the built environment that may facilitate people to travel as smoothly as possible down this road to recovery and suggests elements of the design process that can help achieve this goal.

Designing to Heal highlights the importance of thinking about urban design as a way of nurturing hope and creating the optimal conditions to achieve social objectives.

Emergency Response Guidebook 2012 U. S. Department U.S. Department of Transportation 2015-04-17 The ERG is primarily applicable for hazardous materials transported by highway and railway, but also is applicable for materials transported by air or waterway, as well as by pipeline. It was first issued by the US

Department of Transportation in 1973, but later became a joint publication of the Department of Transportation (US DOT), Transport Canada (TC), and the Secretariat of Communications and Transportation (SCT) of Mexico, with collaboration with the Chemistry Information Center for Emergencies (CIQUIME) of Argentina. The ERG is issued every 4 years, with editions now being published in Spanish (Guía de Respuesta en Caso de Emergencia). In 1996 it was published as the North American Emergency Response Guidebook, but by the next publication in 2000 "North American" was removed due to its use by several South American countries). The ERG "is primarily a guide to aid first responders in quickly identifying the specific or generic hazards of the material(s) involved in the incident, and protecting themselves and the general public during the initial response phase of the incident" and should only be used for the "initial response phase" (about the first thirty minutes) of an

incident . It is divided into six color-coded sections (white [uncolored], yellow, blue, orange, green, and a second white [uncolored]). The ERG includes over 170 "Guides" (found in the Orange Section) that identify the primary hazards associated with the applicable general category of hazardous material and general guidance on how to respond to incidents involving that general category of hazardous material. The primary purpose of ERG is to direct the emergency responders to the most appropriate of these guides, based on the incident. The ERG also provides guidance regarding recommended evacuation distances, if applicable, in the Green Section.
