Project Management Dennis Lock 2020-07-30
Dennis Lock's masterly exposition of the principles and practice of project management has been pre-eminent in its field for 45 years and was among the first books to treat project management as a holistic subject. But Project Management has been kept completely up to

date by regular and sensitive revisions to ensure that it remains fresh and totally relevant. Project Management explains the entire project management process in great detail, demonstrating techniques from simple charts to detailed computer applications. Everything is reinforced with clear diagrams and case examples, many new for this edition. The author has expanded discussion of topics such as supply chain management and the project management office (PMO), and there are new chapters about implementing change management projects and the role of senior managers in supporting projects. Obsolescent or less frequently used methods have been stripped out, but readers of the hardback Tutor's Edition will find that this deleted material lives on as new chapters on the accompanying downloadable resources, which have been thoroughly revised. Importantly, that disc includes comprehensive Power Point presentations with hundreds of well designed slides that tutors can use directly as a valuable

resource for their lectures. Students have always commented on this book's reader-friendly style, which is free of unnecessary jargon, with clear diagrams and a construction that is logically organized, well indexed and simple to navigate. This Tenth Edition is certain to maintain the book's acclaimed status as the standard work for managers and students alike.

Let us understand Mathematics-Class 2
 Harinder Mahajan 2021-07-17 This is the second of a series of books based on the NCERT syllabus and research on the teaching of mathematics. The focus here is on an understanding of concepts and procedures. The

concepts and procedures are presented by manipulatives, pictures, real-world situations, spoken and written words, and symbols and videos that enhance their learning. Opportunities are provided for communication, translation from one mode to another, and applications to daily life. The teachers should use manipulatives that are commercially available or can be made and use situations for exercises that are familiar to the children in the class. As most of the schools in India have a paucity of resources, we will use sticks for activities with number concepts. The sticks can be replaced by an abacus or base ten blocks. The schools that can afford should provide materials such as counters, Al abacus, pattern blocks, geometrical models, geoboards, fake money, and use these for explaining concepts and procedures. If the schools/students cannot afford these, teachers can make models of different 2-D and 3-D shapes using cardboard and use dot paper instead of Geoboard. The students can be

asked to bring buttons, scissors, and empty boxes, containers of different shapes and sizes from home. All children should at least have 100 sticks of the same length and rubber bands(they can buy pop sticks or toothpicks) and dot paper. As for most teachers, the textbook is the curriculum. This book is a teaching guide cum workbook for students. As the children have not yet developed the reading skills, the concepts, operations and word problems should be learnt and tested orally first. The exercises with manipulatives and oral work are included to facilitate that. Some activity sheets are also provided that can be printed and used by students.
