Grade Teacher 1971

Teacher-Made Assessments Christopher Gareis 2015-03-24 Assessment is not only a measure of student learning, but a means to student learning. This bestselling book guides you in constructing and using your own classroom assessments, including tests, quizzes, essays, and rubrics to improve student achievement. You will learn how to weave together curriculum, instruction, and learning to make assessment a more natural, useful part of teaching. Find out how to... ensure your assessments are fair, reliable, and valid; construct assessments that meet the level of cognitive demand expected of students; create select-response items and understand technology-enhanced items that are increasingly

being used on assessments; use constructed-response items and develop scoring criteria such as rubrics; and analyze student results on assessments and use feedback more effectively. This second edition features updated examples that reflect the Common Core State Standards as well as other content standards and new, useful samples of teacher-friendly techniques for strengthening classroom assessment practices. No matter what grade level or subject area you teach, this practical book will become your go-to resource for designing effective assessments.

Planning Science Instruction for Emergent Bilinguals Edward G. Lyon 2023 This practical resource takes educators through a planning process—from selecting standards to designing learning activities—that weaves together language, literacy, and science in ways that are responsive to emergent bilinguals. Drawing on extensive and current research, the authors show how secondary educators can use students' own language and lived experiences, coupled with authentic science practices, to provide rich and relevant language support. Using a science unit as a shared text, readers will learn how to

gather rich knowledge about emergent bilinguals, unpack the ideas and language demands of Next Generation Science Standards, strategically embed language and literacy standards in the curriculum, and sequence learning activities around an anchoring phenomenon, a text, and an assessment. In the process, readers will come away with a repertoire of planning tools and examples of how to support emergent bilinguals in using language to collaborate with others and to interpret and produce texts that are central to learning and doing science. Planning Science Instruction for Emergent Bilinguals blends theory and practice so readers understand both how and why this planning process can be used to disrupt social inequity for emergent bilinguals. Book Features: Describes intentional decisions that educators can make when planning a science unit or learning experience. Shows how to weave together Next Generation Science Standards, Common Core

English Language Arts Standards, and language development. Provides a model unit about kelp forest ecosystems to illustrate how theory is translated into practice. Demonstrates how to use emergent bilinguals' assets (linguistic skills, family experiences, personal interests) to create engaging science instruction. Provides a set of planning tools, including both blank templates and completed examples, to guide educators through the planning process.
