Artificial Intelligence in Accounting Othmar M. Lehner 2022-08-05 Artificial intelligence (AI) and Big Data based applications in accounting and auditing have become pervasive in recent years. However, research on the societal implications of the widespread and partly unregulated use of AI and Big Data in several industries remains scarce despite salient and competing utopian and dystopian narratives. This book focuses on the transformation of accounting and auditing based on AI and Big Data. It not only provides a thorough and critical overview of the status-quo and the reports surrounding these technologies, but it also presents a future outlook on the ethical and normative implications concerning opportunities, risks, and limits. The book discusses topics such as future, human-machine collaboration, cybernetic approaches to decision-making, and ethical guidelines for good corporate governance of AI-based algorithms and Big Data in accounting and auditing. It clarifies the issues surrounding the digital transformation in this arena, delineates its boundaries, and highlights the essential issues and debates within and concerning this rapidly developing field. The authors develop a range of analytic approaches to the subject, both appreciative and sceptical, and synthesise new theoretical constructs that make better sense of human-machine collaborations in accounting and auditing. This book offers academics a variety of new research and theory building on digital accounting and auditing from and for accounting and auditing scholars, economists, organisations, and management academics and political and philosophical thinkers. Also, as a landmark work in a new area of current policy interest, it will engage regulators and policy makers, reflective practitioners, and media commentators through its authoritative contributions, editorial framing and discussion, and sector studies and cases.

Solving Principles of Accounting Problems Using Excel for Windows 2005 This text helps students hit the road with a practical set of tools, and the confidence they need to use those tools effectively in making business decisions. The goal is to introduce a new Principles of Accounting text that better reflects a more conceptual and decision-making approach to the material. The authors have taken a new "macro- to micro-" approach

to the Principles of Accounting course by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle (although the Accounting Cycle is thoroughly covered in Chapters 3 and 4). The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. They motivate students by grounding the discussion in the real world, showing them the relevance of the topics covered to their future career.
