Difficult Reading Jason R. Marley 2023-09-07 Difficult Reading offers a new approach to formal experimentation in Caribbean literature. In this insightful study, Jason Marley demonstrates how the aggressive, antagonistic elements common to the mid-twentieth-century Caribbean novel foster emotional responses that spark new forms of communal resistance against colonial power. Marley illustrates how experimental Caribbean writers repeatedly implicate their readers in colonial domination in ways that are intended to unsettle and discomfort. In works such as Denis Williams's *The Third Temptation*, Wilson Harris's *The Secret Ladder*, and Vera Bell's overlooked prose poem *Ogog*, acts of colonial atrocity—such as the eradication of Indigenous populations in Guyana, the construction of the Panama Canal, or the disenfranchisement of Afro-Jamaican communities—become mired in aesthetic obfuscation, forcing the reader to confront and rethink their own relationship to these events. In this way, new literary forms engender new forms of insight and outrage, fostering a newly inspired relation to resistance.

[The Annual Register](#) Edmund Burke 1925 Continuation of the reference work that originated with Robert Dodsley, written and published each year, which records and analyzes the year's major events, developments and trends in Great Britain and throughout the world. From the 1920s volumes of *The Annual Register* took the essential shape in which they have continued ever since, opening with the history of Britain, then a section on foreign history covering each country or region in turn. Following these are the chronicle of events, brief retrospectives on the year's cultural and economic developments, a short selection of documents, and obituaries of eminent persons who died in the year.

[The Digital Sublime](#) Vincent Mosco 2005-09-23 Interpreting the myths of the digital age: why we believed in the power of cyberspace to open up a new world. The digital era promises, as did many other technological developments before it, the transformation of society: with the computer, we can transcend time, space, and politics-as-usual. In *The Digital Sublime*, Vincent Mosco goes beyond the usual stories of technological breakthrough and economic meltdown to explore the myths constructed around the new digital technology and why we feel compelled to believe in them. He tells us that what kept enthusiastic investors in the dotcom era bidding up stocks even after the crash had begun was not willful ignorance of the laws of economics but belief in the myth that cyberspace was opening up a new world. Myths are not just falsehoods that can be disproved, Mosco points out, but stories that lift us out of the banality of everyday life into the possibility of the sublime. He argues that if we take what we know about cyberspace and situate it within what we know about culture—specifically the central post-Cold War myths of the end of history, geography, and politics—we will add to our knowledge about the digital world; we need to see it "with both eyes"—that is, to understand it both culturally and materially. After examining the myths of cyberspace and going back in history to look at the similar mythic pronouncements prompted by past technological advances—the telephone, the radio, and television, among others—Mosco takes us to Ground Zero. In the final chapter he considers the twin towers of the World Trade Center—our icons of communication, information, and trade—and their part in the politics, economics, and myths of cyberspace.
