Writing Our Lives Rhoda J. Maxwell 1999 "This book is an integrated rhetoric and reader that presents a sequential approach to writing based on the reader's own interests, experiences, and background. The advantage of this book's sequential approach is that regardless of age or experience, each individual has knowledge of and compelling interest in the topics presented. Because the 44 readings present a variety of authors, styles, and opinions, readers will come to appreciate different points of views from differing experiences. "Readers will learn to select which writing patterns are best suited to the audience and purpose of a particular writing task. The writing assignments are cumulative and sequential, asking the reader to refer to previous assignments when writing new material, thus validating and heightening self-esteem through writing. "For anyone interested in strengthening their writing skills.

Teaching Science in Elementary and Middle School Cory A. Buxton 2007-02-26 "I believe the experiments in this text can be well integrated into any science education course and help create an environment of exploration." - Willis Walter, Jr., Florida AM University "This textbook should be a companion of all elementary and middle school pre-service and in-service teachers who are interested in educating students of different abilities and backgrounds" - Benjamin C. Ngwudike, Jackson State University "Science is almost always thought of as a solitary content area practiced by lone practitioners in isolated laboratories. The reality is that science is highly dependent upon culture and history. This textbook meaningfully presents these relationships in a fashion accessible to college level teacher candidates" - Claudia A. Balach, Slippery Rock University of Pennsylvania *Teaching Science in Elementary and Middle School: A Cognitive and Cultural Approach* is an introductory science curriculum and methods textbook for pre-service teachers in primary and middle schools. The primary purpose of the book is to provide an introduction to the teaching of science with an emphasis on guiding the pre-service teacher toward: - conceptual understanding of core standards-based science content from the four major scientific disciplines - application of scientific methods and processes of inquiry to the learning of these science concepts - development of scientific language that is both expressive and constitutive in the formation of scientific reasoning - the ability to guide learners through numerous core scientific experiments that help to illuminate items 1-3 - evaluation of social and cultural factors that shape and influence both science and science education - analysis of the local context in which science must be understood (as well as the global context) - synthesis of science as

interrelated with other aspects of the world and how this idea can be taught to students through integrated and thematic instruction. The approach throughout is clear and practical, and is designed to foster reflective teaching rooted in research and theory. *Teaching Science in Elementary and Middle School: A Cognitive and Cultural Approach* is a synthesis of current knowledge in science education, cognition and culture. The authors provide a text that fosters the development of teachers who feel prepared to engage their students in rich science learning experiences.
