Implementing CICS Web Services Nigel Williams 2007 The Web services support in CICS Transaction Server Version 3.1 enables your CICS programs to be Web service providers or requesters. CICS supports a number of specifications including SOAP Version 1.1 and Version 1.2, and Web services distributed transactions (WS-Atomic Transaction). This IBM Redbooks publication will help you configure the CICS Web services support for both HTTP and WebSphere MQ based solutions. We show how Web services can be used to integrate J2EE applications running in WebSphere Application Server with COBOL programs running in CICS. It begins with an overview of Web services standards and the Web services support provided by CICS TS V3.1. Complete details for configuring CICS Web services using both HTTP and WebSphere MQ are provided next, along with the steps for using Web services to connect to CICS from a service integration bus. The book then shows how CICS Web services can be secured using a combination of Web Services Security (WS-Security) and transport-level security mechanisms such as SSL/TLS. Finally, it demonstrates how atomic Web services transactions can be configured to allow WebSphere and CICS resource updates to be synchronized. This book concentrates on implementation specifics such as security, transactions, and availability.

What Is This Book About? This is a book about Web Services. Web Services are still more like a movement than a mature technology. The movement is motivated by a vision of a semi-auto mated Web that can support long chains of interactions between autonomous agents. There are three important components to that vision. One is interoperability: a service can have clients (agents) from any platform, in any language. Another is autonomy: an agent can discover the services it needs from their published descriptions that include both what the service can do and how it does it (the interfaces of available actions). The third is (semi) automatic code creation: one description can be used by a development framework to automate the creation of code for clients and by the services themselves. As of today, interoperability is close to full realization, with only occasional glitches; autonomy is a distant vision; but it still has problems.

Interoperability has been achieved code creation is useful in part by using an XML-based high-level protocol (SOAP) for message exchanges between clients and services. As long as the client can produce messages in the right format, it doesn't matter what language they're written in or on what platform they run. The first three chapters of our book show how to write platform-independent Web Services clients in Javascript and Java running from within a browser (IE6 or Mozilla).

Scripting Languages Rohit Khare 1997 In spite of all the power built into popular web utilities, the informality, ease, and rapid development cycle of scripting languages make them well suited to the constant change common to most web sites. Scripting Languages: Automating the Web guides users and developers in choosing and deploying scripting solutions. End users benefit from client-side scripting to make pages livelier, to automate form-filling, and to accelerate web user interfaces like live select-box widgets. Even the most basic web server software has scripting gateways to create more active web content. Server-side includes and markup allow servers to customize pages on-the-fly. Common Gateway Interface (CGI) hooks allow developers to create entire pages and graphics under program control. This issue of the World Wide Web Journal explores how users can add scriptable and extensible behavior to the Web in a variety of ways. For example, within the web client user interface, we offer articles on JavaScript (Nick Heinle), Python (Guido van Rossum), and VBScript (Paul Lomax). Next, within the web server programming interface, see Lincoln Stein's article on exploring CGI with Perl, Ron Petruska's "Why WIN-CGI?", and Clint Wong's description of LWP -- the library modules for WWW access in Perl. Finally, as a back-end gateway to other services, are articles on World Wide Web gateways (Shishir Gundavaram) and web database connectivity with scripting (Peter Lazar). In addition, this issue examines the web-wide

impact of Perl as the scripting language of choice for webmasters everywhere, with an in-depth article featuring Perl developers Larry Wall and Tom Christiansen.

Web Scripting and Api Anshuman Mishra 2025-08-10 "Web Scripting and API Integration for Data Science: A Practical Guide to Building Data-Driven Applications" is a comprehensive and practical book designed specifically for data science students and professionals who want to master the essential web scripting and API skills needed to interact with, extract, and manipulate data from web sources and services. In today's data-driven world, data scientists are not only expected to analyze and interpret vast datasets but also to collect, integrate, and manage data from diverse sources, many of which reside on the web and are accessible through APIs (Application Programming Interfaces). This book bridges the gap between core data science knowledge and web technologies by empowering readers with the hands-on skills needed to build real-world data applications using web scripting and APIs. **What This Book Covers** This book is structured to guide readers step-by-step, starting from the fundamental concepts of web scripting languages like JavaScript and Python, progressing through the intricacies of consuming and creating RESTful APIs, and culminating in advanced topics such as secure API authentication, automation of data pipelines, and integration with machine learning workflows. It begins by demystifying web scripting - explaining how client-side and server-side scripting work, why they are crucial for data collection, and how data scientists can leverage them to streamline workflows. The core of the book focuses on APIs, which have become the backbone of modern data exchange. Readers will learn what APIs are, the different types (REST, SOAP, GraphQL), and practical methods to consume data using JavaScript and Python. Advanced chapters explore how to build your own REST API services, authenticate API calls securely, and handle

real-time data streams. The book also emphasizes visualization and automation - teaching how to use web data effectively in dashboards and automate data collection for continuous, real-time insights. Finally, it presents two comprehensive project-based chapters, enabling readers to apply their knowledge to build functional dashboards and deploy APIs integrated with machine learning models. Who Should Read This Book? This book is ideal for: Data Science Students: Whether at undergraduate, postgraduate, or professional certification levels, students who want to expand their data science toolkit with practical web and API skills will find this book invaluable. It complements traditional data science curricula by adding a web-focused perspective critical for handling live and streaming data sources.
