The Professional Practice of Architectural Working Drawings teaches you how to become fluent in the visual language of architecture, to communicate more effectively with all project stakeholders.

Architects' Data Ernst Neufert 2012-03-26 Neufert's Architects' Data is an essential reference for the initial design and planning of a building project. It provides, in one concise volume, the core information needed to form the framework for the more detailed design and planning of any building project. Organised largely by building type, it covers the full range of preliminary considerations, and with over 6200 diagrams it provides a mass of data on spatial requirements. Most illustrations are dimensioned and each building type includes plans, sections, site layouts and design details. An extensive bibliography and a detailed set of metric/ imperial conversion tables are included. Since it was first published in Germany in 1936, Ernst Neufert's handbook has been progressively revised and updated through 39 editions and many translations. This fourth English language edition is translated from the 39th German edition, and represents a major new edition for an international, English speaking readership. Reviews of the Previous Edition: "Neufert's Architects' Data was the first book I bought when I started my studies in architecture. It was invaluable for me then and it is still a useful aid in my designs." —Cesar Pelli "With this thorough rewrite Neufert has produced yet again an invaluable reference book." —The Architects' Journal

Architectural Graphic Standards Charles George Ramsey 2000-07-31 Architectural students have for generations learned the essence of building design through the pages of "Graphic Standards": the drawings, charts, detailed illustrations, originally developed by architects George Ramsey and Harold Sleeper, that represent building components and systems, including everything from door frames to roof designs, to air ducts to outdoor sports facilities. Beginning ten years ago, Wiley began offering a student edition of the primary book, "Architectural Graphic Standards," which was created as an abridgment of the prior edition of that book. This new student edition will be an abridgment of the present 9th edition, offering all the essential features of that very successful edition in an easily accessible and affordable format. Also, new to this student edition will be a greater offering of "Design guidelines," giving the student and instructor alike greater opportunity to use this publication as a teaching tool.
