Ovarian Aging and Reproduction Wenpei Xiang  
2023-09-01 The ovary plays a very significant role in aging. The regenerative capacity of stem cells is the key factor to promote healthy aging, and the stem cell viability would decline sharply after the reproductive period, especially in women. Except for stem cell aging and neuroendocrine aging, ovarian aging is also a hotspot in the field of aging research. Recent researches have investigated many factors affecting ovarian function or aging, in terms of gene mutation, epigenetic erosion, endocrine dysfunction and environment-dependent extrinsic factors. This Research Topic aims to

explore in detail all the factors related to ovarian aging and female reproduction outcomes. We'll discuss various age-related molecules, such as P16, P21, etc., as well as mutations in premature aging genes, such as FSHR mutations, abnormalities in the mitochondrial respiratory chain, and redox imbalances that contribute to ovarian aging. Also, we are committed to addressing the relationship between female factors and reproductive outcomes. Besides, the discussion also focus on measures to delay ovarian aging, such as antioxidant drugs, mesenchymal stem cell therapy, ovarian tissue engineering exploration, etc. 1) This Research Topic aims to provide nursing suggestions related to ovarian aging and measures to prevent ovarian aging, including psychological intervention, improving living habits, optimizing

the environment and other suggestions that may delay ovarian aging, and in turn to provide tips for clinical treatment. 2) This Research Topic aims to reveal the novel factors involved in ovarian aging and their related mechanisms, including function-related gene mutations, mitochondrial and oxidative stresses' damage, metabolism-related molecules, and the specific mechanisms of these factors. 3) This Research Topic aims to discuss the influence of female-related factors on assisted reproductive outcome, such as female age, BMI, serum hormone level, endometrial preparation program, follicular fluid quality and other factors. 4) This Research Topic aims to explore the role of stem cells and tissue engineering in delaying ovarian aging, such as mesenchymal stem cell intravenous injection and the in situ ovarian tissue transplantation. 5) This Research Topic still involves in the research on anti-aging drugs for ovaries.

**Nutrition in Lifestyle Medicine** James M.

Rippe 2016-12-29 This newest addition to the Nutrition and Health series focuses on nutrition's key role in lifestyle interventions to prevent and manage diseases. The book pays particular attention to nutritional considerations related to obesity, diabetes, and cardiovascular disease. Edited by cardiologist, Dr. James Rippe, a well-known expert in the nascent specialty of Lifestyle Medicine, *Nutrition in Lifestyle Medicine* will also focus on a variety of specialized areas such as nutrition for athletes and physically active individuals, hydration, and nutrition throughout the life cycle (spanning from children to individuals over the age of 60). In addition, chapters will be included on controversies in nutrition, such as health effects of added sugars and saturated fatty acids in the diet. Finally, specialized chapters will be included in such areas as nutrition for women, nutrition for men, nutrition for latinos, the use of supplements, communication about nutrition, public policy issues, and the interface between

nutrition and physical activity. Lifestyle Medicine, supported by the American Journal of Lifestyle Medicine, Dr. Rippe's textbook Lifestyle Medicine (CRC Press, 2013) and American College of Lifestyle Medicine (ACLM), is a new national medicine specialty that stresses the use of lifestyle interventions in the treatment and management of disease. Its practitioners effectively manage medical treatments alongside the lifestyle interventions, for example lowering insulin treatment for patients with diabetes, reducing the dose of anti-hypertension medications for people with hypertension, and prescribing certain medical interventions that aid in smoking cessation.
